Recursion

# Download Day 2024

# Agenda

**Breakfast & Arrival at Recursion** (Upper Level) — 8:30 am – 9:30 am

## Morning Session — 9:30 am – 12:30 pm

### Welcome

### State of Recursion
Chris Gibson PhD – Co-Founder & CEO

### Recursion OS
Lina Nilsson PhD – Senior VP of Inception Labs

### Preclinical
Laura Schaevitz PhD – Senior VP and Head of Research

### Fireside Chat with Deepak Nijhawan, MD, PhD
David Mauro MD PhD – Chief Medical Officer
Deepak Nijhawan MD PhD – UT Southwestern, Distinguished Chair in Biomedical Science

### Tours & Demos
Senior Management

**Lunch & Break** (Upper Level, High Throughput Feeding) — 12:30 – 1:30 pm

## Afternoon Session — 1:30 pm – 4:30 pm

### Afternoon Convocation
Najat Khan PhD – Chief R&D Officer & Chief Commercial Officer

### Partnerships
Matt Kinn – Senior VP of Business Development & Corporate Initiatives
John Marioni PhD – Genentech, Senior VP and Head of Computational Sciences

### Clinical Programs
David Mauro MD PhD – Chief Medical Officer

### Company & Milestones
Michael Secora PhD – Chief Financial Officer

### Break

### Fireside Chat with Jensen Huang
Chris Gibson PhD – Co-Founder & CEO
Jensen Huang – NVIDIA, Founder & CEO

### Closing Remarks
Chris Gibson PhD – Co-Founder & CEO

**Dinner — Mar Muntanya** (Hyatt Regency) — 5:00 – 7:00 pm

Recursion

# Disclaimers

This presentation and any accompanying discussion and documents contain information that includes or is based upon "forward-looking statements" within the meaning of the Securities Litigation Reform Act of 1995. These forward-looking statements are based on our current expectations, estimates and projections about our industry and our company, management's beliefs and certain assumptions we have made. The words “plan,” “anticipate,” “believe,” “continue,” “estimate,” “expect,” “intend,” “may,” “will” and similar expressions are intended to identify forward-looking statements. Forward-looking statements made in this presentation include outcomes and benefits expected from the Tempus partnership, including our ability to leverage the datasets acquired through the license agreement into increased machine learning capabilities and accelerate clinical trial enrollment; outcomes and benefits expected from the Enamine partnership, including the generating and co-branding of new chemical libraries; outcomes and expected benefits from the Helix partnership, including the development of causal AI models and biomarker and patient stratification strategies; expected BioHive supercomputer capabilities; outcomes and benefits from licenses, partnerships and collaborations, including option exercises by partners, additional partnerships, and the ability to house tools on the BioNeMo Marketplace; the potential for additional partnerships and making data and tools available to third parties; advancements of our Recursion OS, including augmentation of our dataset; outcomes and benefits expected from the Large Language Model-Orchestrated Workflow Engine (LOWE); the occurrence or realization of any near- or medium-term potential milestones; the initiation, timing, progress, results, and cost of our research and development programs and our current and future preclinical and clinical studies, including timelines for enrollment in studies, data readouts, and progression toward IND-enabling studies; the potential size of the market opportunity for our drug candidates; our ability to identify viable new drug candidates for clinical development and the accelerating rate at which we expect to identify such candidates; our expectation that the assets that will drive the most value for us are those that we will identify in the future using our datasets and tools, and many others. Forward-looking statements made in this presentation are neither historical facts nor assurances of future performance, are subject to significant risks and uncertainties, and may not occur as actual results could differ materially and adversely from those anticipated or implied in the forward-looking statements. For a discussion of factors that could affect our business, please refer to the "Risk Factors" sections in our filings with the U.S. Securities and Exchange Commission, including our Annual Report for the Fiscal Year ended December 31, 2023, on Form 10-K and our most recent Quarterly Report on Form 10-Q. This presentation does not purport to contain all the information that may be required to make a full analysis of the subject matter. We undertake no obligation to correct or update any forward-looking statements, whether as a result of new information, future events or otherwise.

Certain information contained in this presentation relates to or is based on studies, publications, surveys and other data obtained from third-party sources and the company’s own internal estimates and research. While the company believes these third-party sources to be reliable as of the date of this presentation, it has not independently verified, and makes no representation as to the adequacy, fairness, accuracy or completeness of, any information obtained from third-party sources. In addition, all of the market data included in this presentation involves a number of assumptions and limitations, and there can be no guarantee as to the accuracy or reliability of such assumptions. Finally, while the company believes its own internal research is reliable, such research has not been verified by any independent source.

Cross-trial or cross-candidate comparisons against other clinical trials and other drug candidates are not based on head-to-head studies and are presented for informational purposes; comparisons are based on publicly available information for other clinical trials and other drug candidates.

Any non-Recursion logos or trademarks included herein are the property of the owners thereof and are used for reference purposes only.

# Our Hopes for Today

Share details and updates on our:

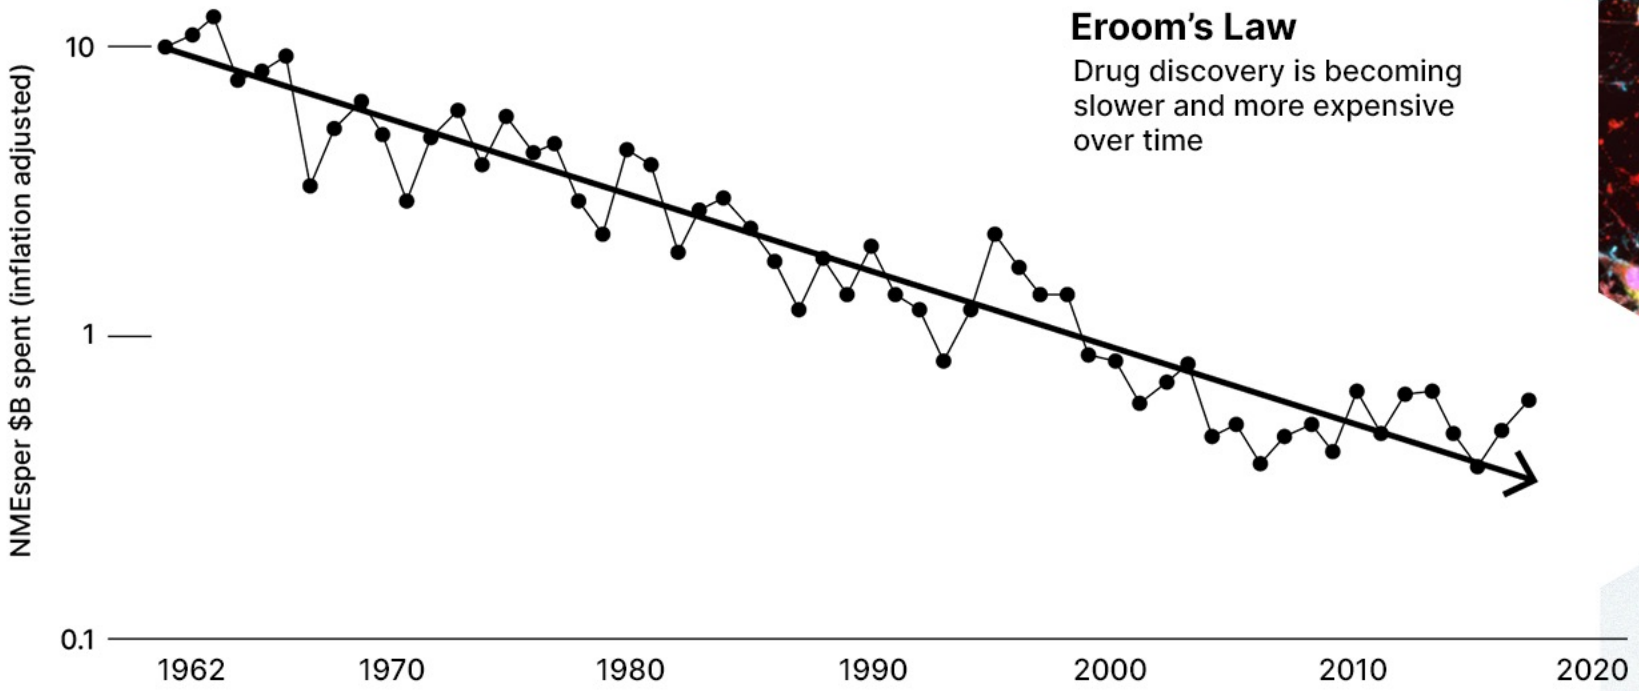
- Pipeline – with 7 clinical trial readouts expected in the next ~18 months
- Partnerships - with potential near term options on both maps and programs
- Platform - with industry-leading data generation and compute

Help define what we view as a tipping point moment as BioTech transitions to TechBio and understand why Recursion is uniquely positioned to take advantage of this

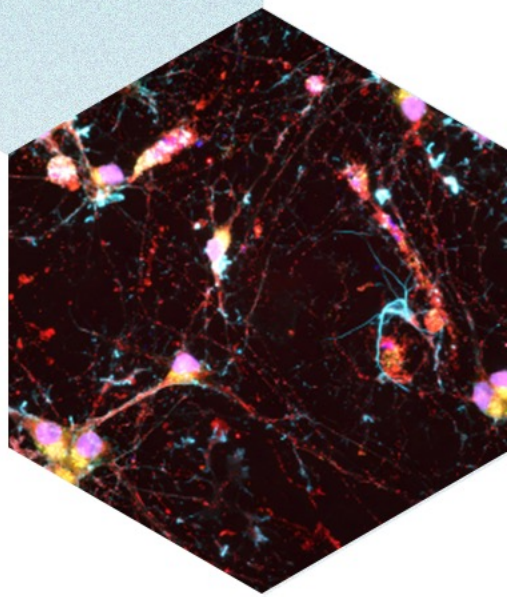
Let you get a feel for Recursion and hear from expert partners from outside Recursion about the current and potential future impact of our work

# The Moment: A Tale of Two Cities

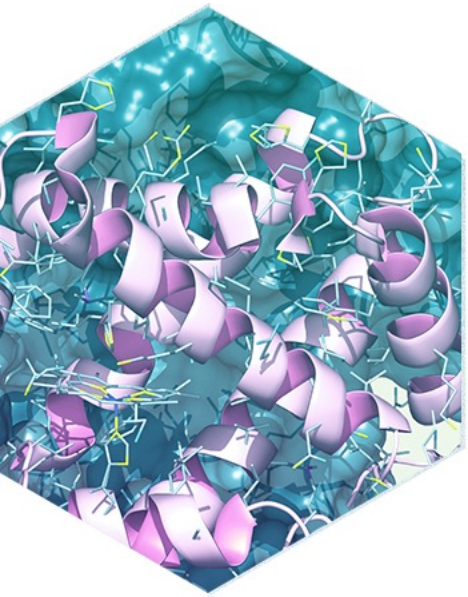
# A Tale of Two Cities: BioPharma



Scannell et al., *Nature Reviews Drug Discovery* 11:191, 2012



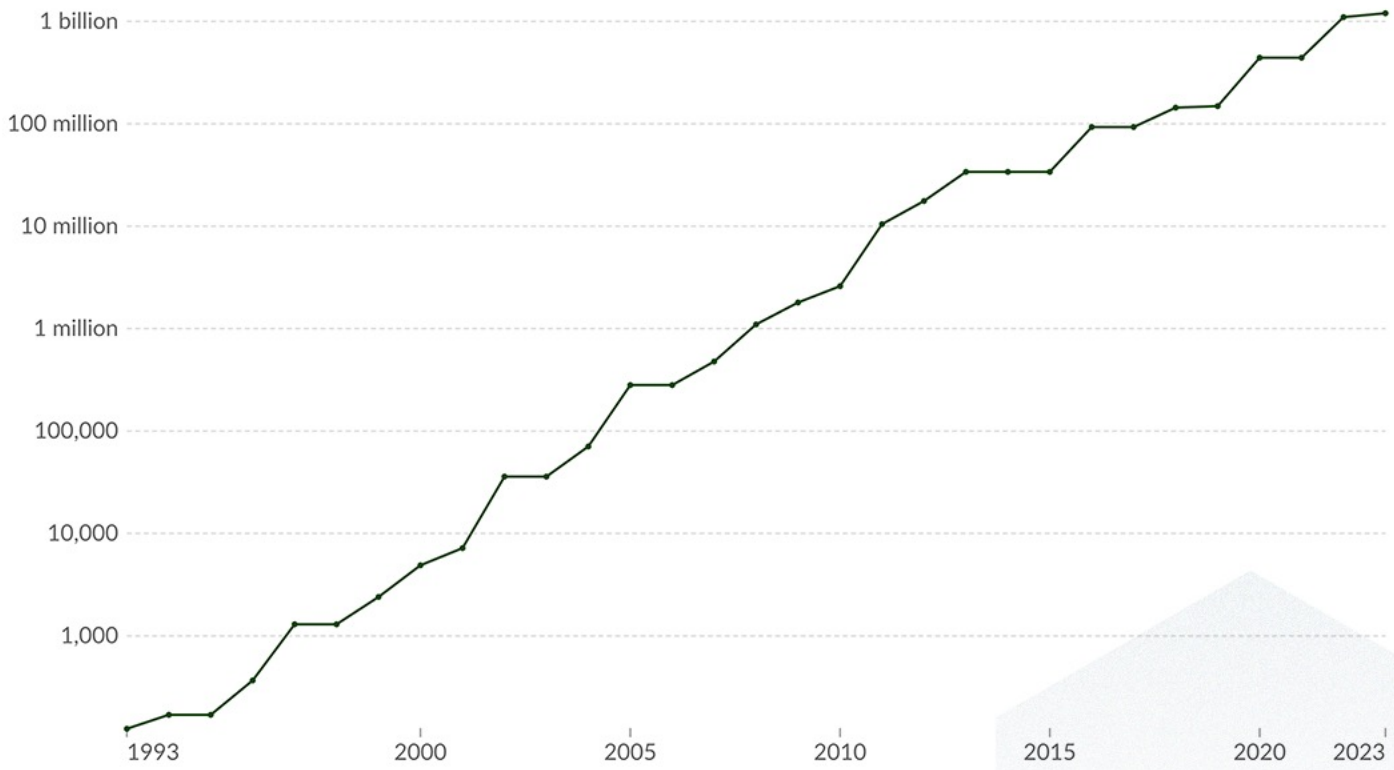
# A Tale of Two Cities: Tech



## Computational capacity of the fastest supercomputers

Our World in Data

The number of floating-point operations[1] carried out per second by the fastest supercomputer in any given year.
This is expressed in gigaFLOPS, equivalent to $10^9$ floating-point operations per second.



**Data source:** Dongarra et al. (2023)

OurWorldInData.org/technological-change | CC BY

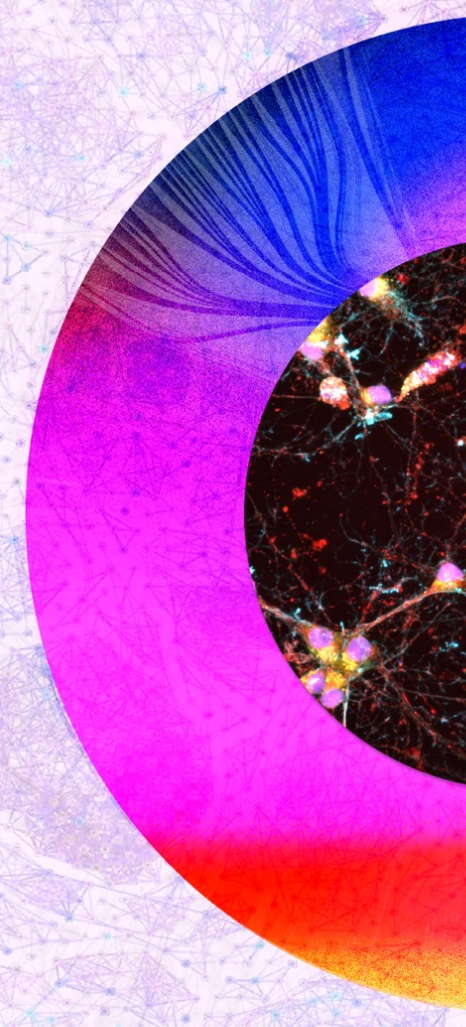
**1. Floating-point operation**: A floating-point operation (FLOP) is a type of computer operation. One FLOP represents a single arithmetic operation involving floating-point numbers, such as addition, subtraction, multiplication, or division.

# The Evolution of BioTech into TechBio

We believe the transformation of BioPharma through AI is inevitable, just as we are seeing in so many industries — we believe it is a matter of who, how and when

New types of companies have emerged that are truly “bilingual” in tech and science

Data, compute, and automation are shifting the speed, cost, and quality of novel insights today, and we are nearing the stage where we can harvest the earliest of this jump forward

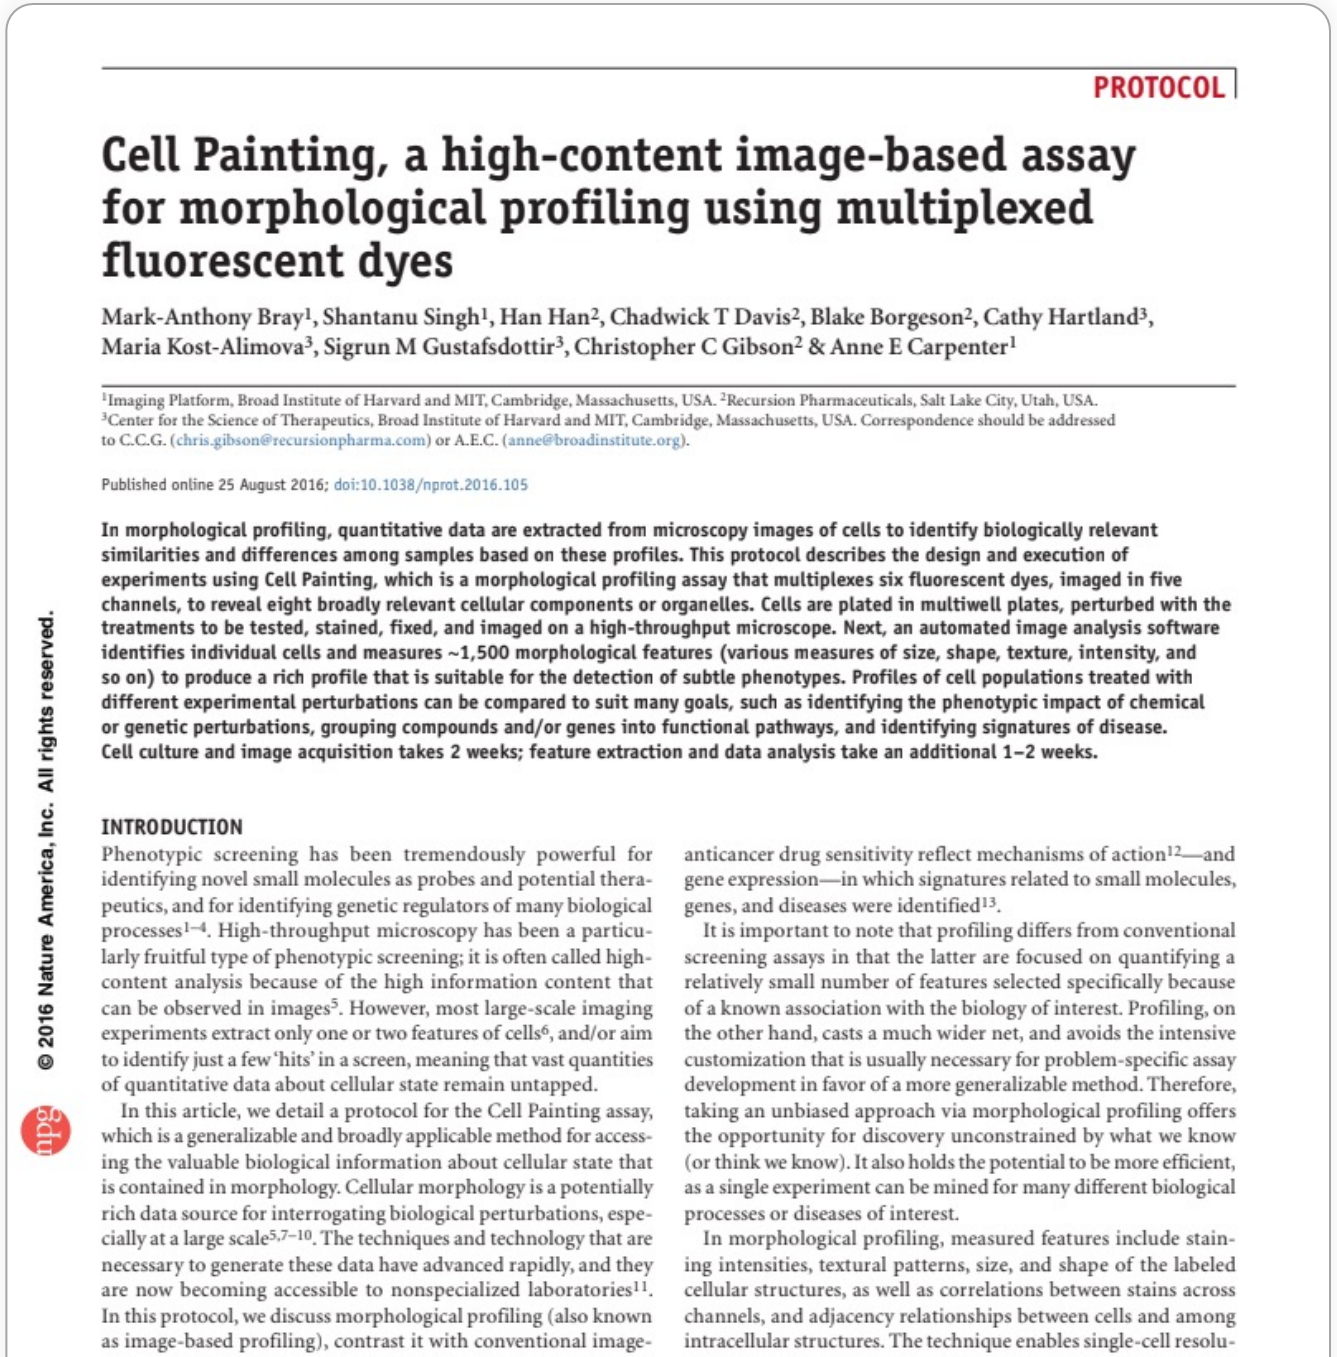


# TechBio Origins: Point Solutions

Most BioTech companies have built a point solution - they've developed a tool, process, model or analysis to accomplish an important step in drug discovery.

**This is how we started too.**

But discovering and developing medicines requires hundreds of steps…



PROTOCOL

## Cell Painting, a high-content image-based assay for morphological profiling using multiplexed fluorescent dyes

Published online 25 August 2016; doi:10.1038/nprot.2016.105

**In morphological profiling, quantitative data are extracted from microscopy images of cells to identify biologically relevant similarities and differences among samples based on these profiles. This protocol describes the design and execution of experiments using Cell Painting, which is a morphological profiling assay that multiplexes six fluorescent dyes, imaged in five channels, to reveal eight broadly relevant cellular components or organelles. Cells are plated in multiwell plates, perturbed with the treatments to be tested, stained, fixed, and imaged on a high-throughput microscope. Next, an automated image analysis software identifies individual cells and measures ~1,500 morphological features (various measures of size, shape, texture, intensity, and so on) to produce a rich profile that is suitable for the detection of subtle phenotypes. Profiles of cell populations treated with different experimental perturbations can be compared to suit many goals, such as identifying the phenotypic impact of chemical or genetic perturbations, grouping compounds and/or genes into functional pathways, and identifying signatures of disease. Cell culture and image acquisition takes 2 weeks; feature extraction and data analysis take an additional 1–2 weeks.**

### INTRODUCTION

Phenotypic screening has been tremendously powerful for identifying novel small molecules as probes and potential therapeutics, and for identifying genetic regulators of many biological processes[1–4]. High-throughput microscopy has been a particularly fruitful type of phenotypic screening; it is often called high-content analysis because of the high information content that can be observed in images[5]. However, most large-scale imaging experiments extract only one or two features of cells[6], and/or aim to identify just a few 'hits' in a screen, meaning that vast quantities of quantitative data about cellular state remain untapped.

In this article, we detail a protocol for the Cell Painting assay, which is a generalizable and broadly applicable method for accessing the valuable biological information about cellular state that is contained in morphology. Cellular morphology is a potentially rich data source for interrogating biological perturbations, especially at a large scale[5,7–10]. The techniques and technology that are necessary to generate these data have advanced rapidly, and they are now becoming accessible to nonspecialized laboratories[11]. In this protocol, we discuss morphological profiling (also known as image-based profiling), contrast it with conventional image-anticancer drug sensitivity reflect mechanisms of action[12]—and gene expression—in which signatures related to small molecules, genes, and diseases were identified[13].

It is important to note that profiling differs from conventional screening assays in that the latter are focused on quantifying a relatively small number of features selected specifically because of a known association with the biology of interest. Profiling, on the other hand, casts a much wider net, and avoids the intensive customization that is usually necessary for problem-specific assay development in favor of a more generalizable method. Therefore, taking an unbiased approach via morphological profiling offers the opportunity for discovery unconstrained by what we know (or think we know). It also holds the potential to be more efficient, as a single experiment can be mined for many different biological processes or diseases of interest.

In morphological profiling, measured features include staining intensities, textural patterns, size, and shape of the labeled cellular structures, as well as correlations between stains across channels, and adjacency relationships between cells and among intracellular structures. The technique enables single-cell resolu-

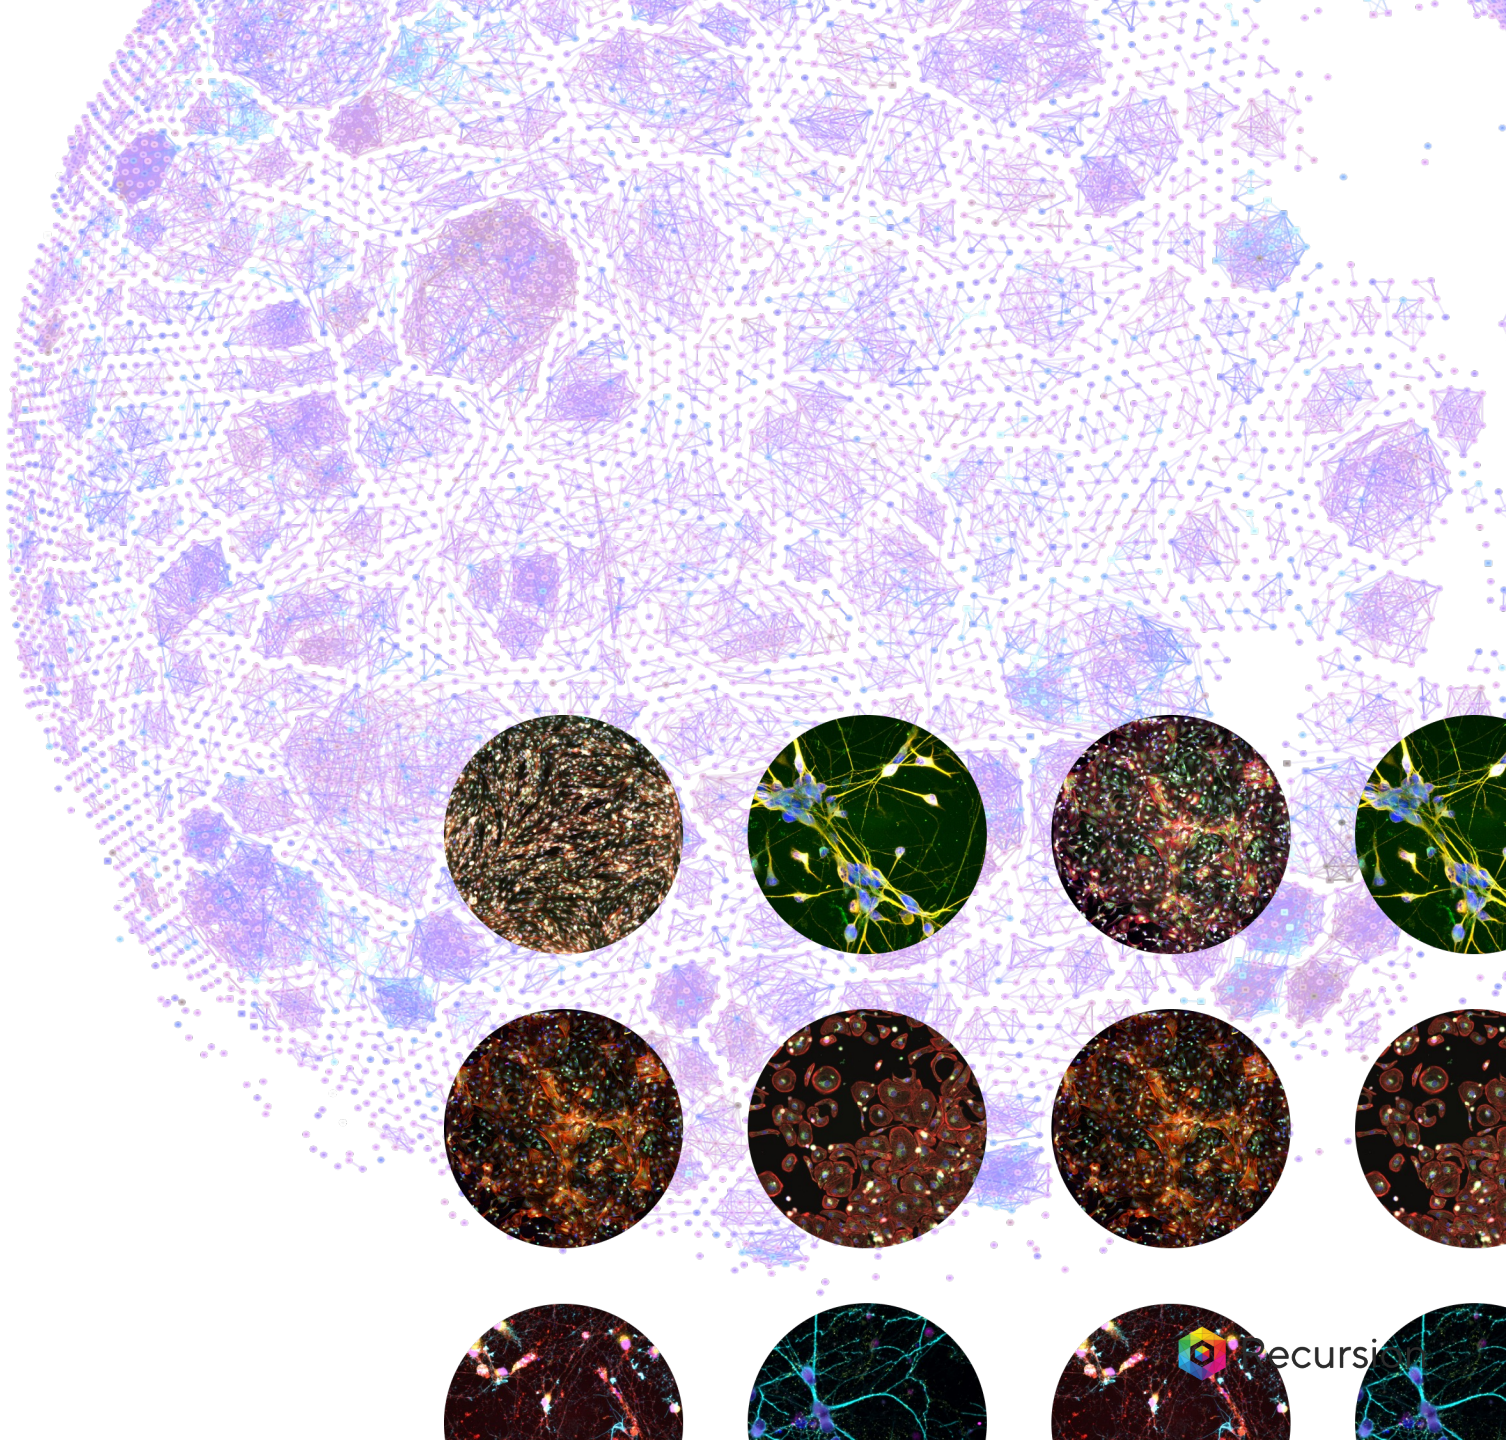
# Our Purpose

We exist to run an experiment...

….An experiment to determine if there might be a better way to discover and develop drugs...

...We need this sort of ambition in BioTech if we hope to have a chance of transforming our ability to impact patients and drive down the cost of medicines.



# What to Expect from Recursion in the Near Term

**Pipeline**

- 7 clinical trial readouts expect over the next ~18 months with new programs embracing our tools to drive novel chemistry against novel targets advancing quickly

**Partnership**

- Roche & Genentech: program optioned in oncology continues to progress with potential additional near-term program & very near-term map options
- Bayer: On track to complete 25 unique multi-modal data packages in Q3 2024 with first joint Project now advancing rapidly towards Lead Series nomination

**Platform**

- Internal programs now initiated by LLM with multiple hit nominations for LLM-generated programs with more on the way
- Moving towards large-scale multi-omics and generalizable foundation models with first genome-scale transcriptomics map and patient data
- Data and tools available to biopharma and commercial users: Bayer will be 1st beta-user of LOWE for drug discovery and development

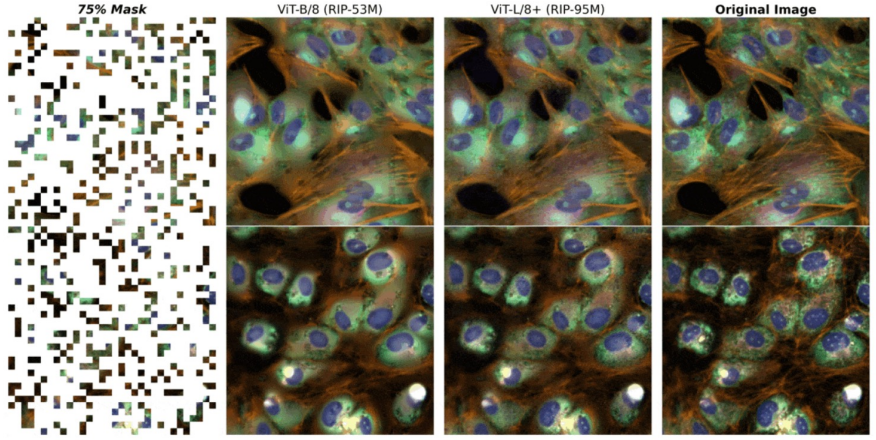
## Phenomenal AI for Pharma: Recursion Brings Phenom-Beta Model to BioNeMo

Recursion is the first hosting partner offering an AI model through BioNeMo cloud APIs: Phenom-Beta, a vision transformer model that extracts biologically meaningful features from cellular microscopy images.

This capability can provide researchers with insights about cell function and help them learn how cells respond to drug candidates or genetic engineering.



Phenom-Beta performed well on image reconstruction tasks, a training metric to evaluate model performance. Read the NeurIPS workshop paper to learn more.

**Phenom-Beta, available on NVIDIA BioNeMo, outperforms open-source "gold standard" CellProfiler**

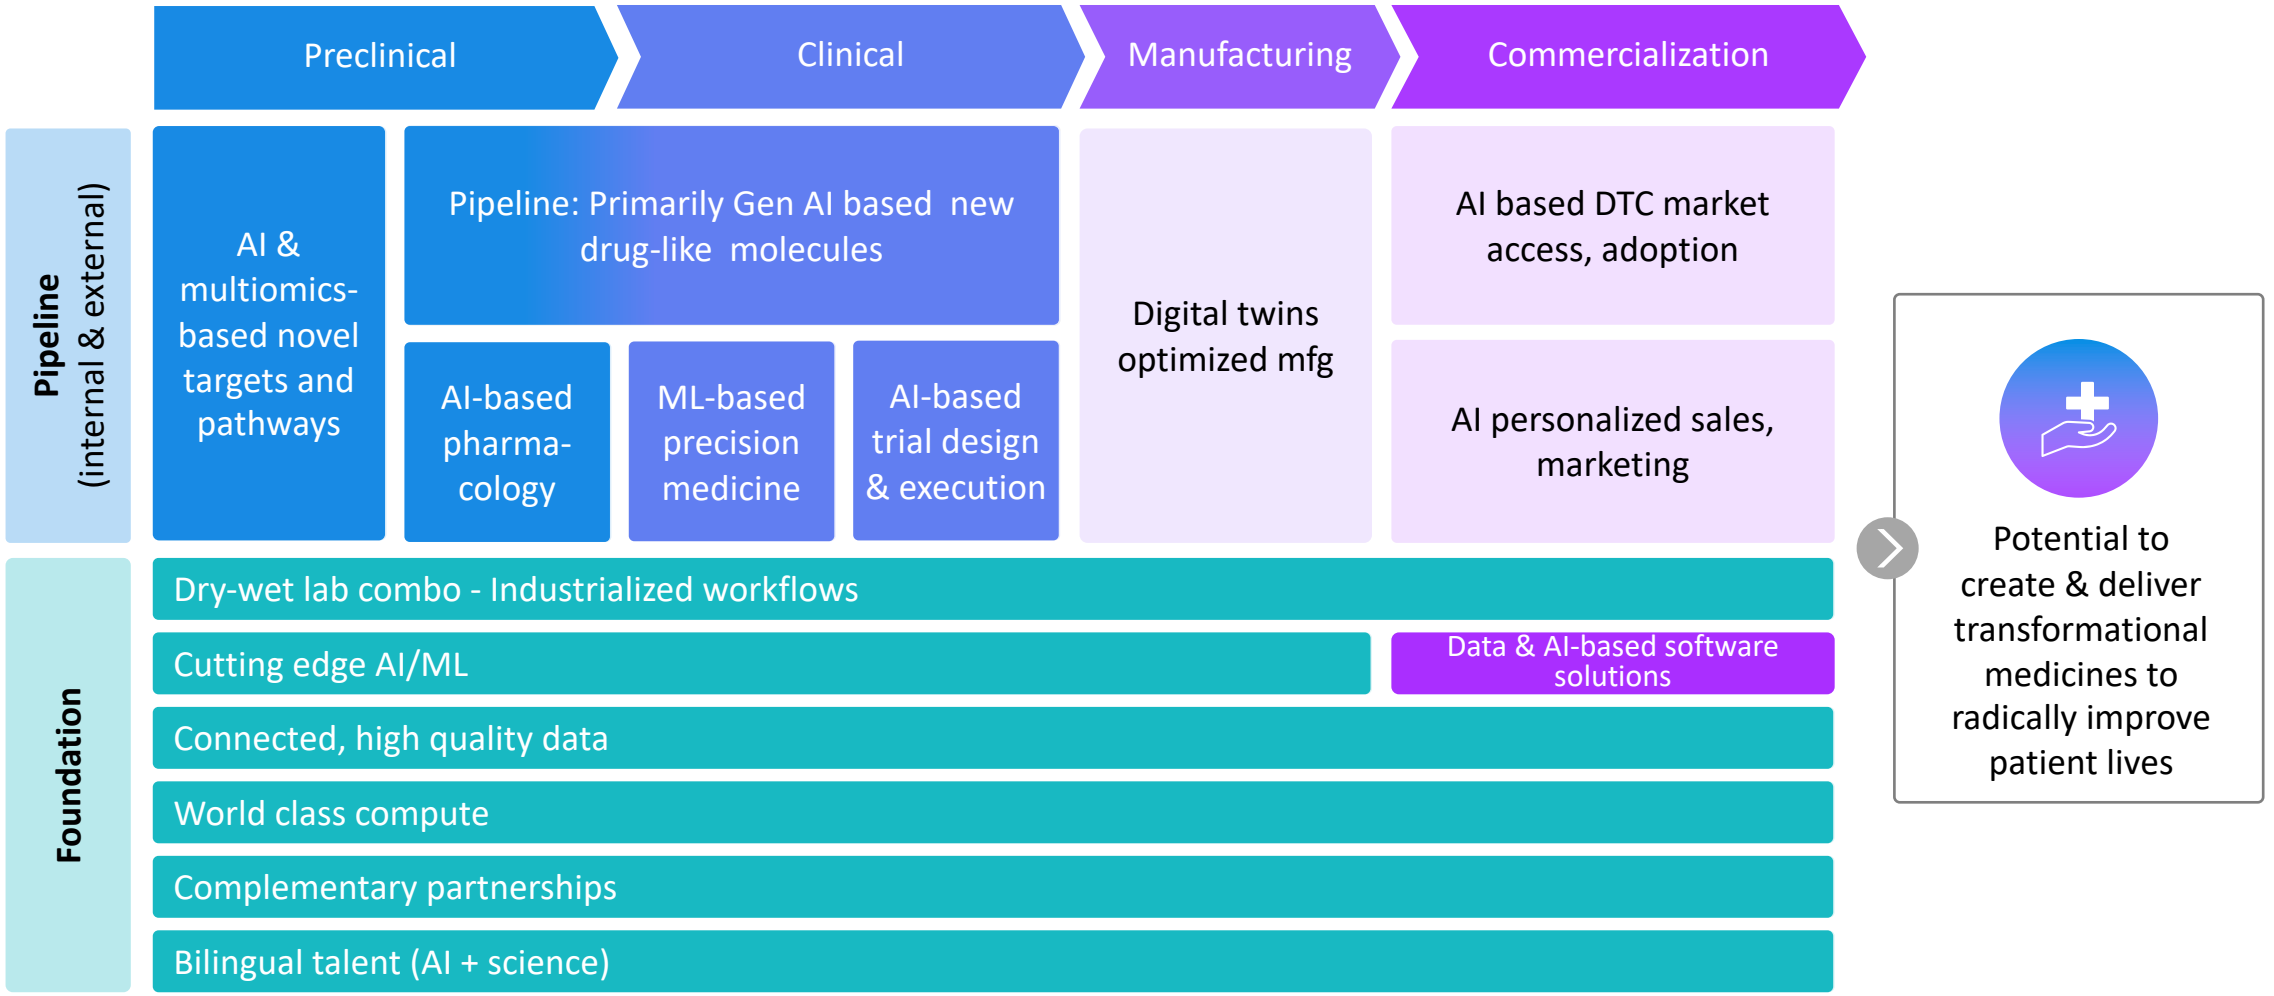
# What's next?



Preclinical
Clinical
Manufacturing
Commercialization
Pipeline (internal & external)
AI & multiomics-based novel targets and pathways
Pipeline: Primarily Gen AI based new drug-like molecules
AI-based pharma-cology
ML-based precision medicine
AI-based trial design & execution
Digital twins optimized mfg
AI based DTC market access, adoption
AI personalized sales, marketing
Foundation
Dry-wet lab combo - Industrialized workflows
Cutting edge AI/ML
Data & AI-based software solutions
Connected, high quality data
World class compute
Complementary partnerships
Bilingual talent (AI + science)
Potential to create & deliver transformational medicines to radically improve patient lives

# Path forward objectives – next 12 months

Advance Preclinical and Clinical Stage Programs

Enhance AI-Driven Chemistry

Innovate with AI across Clinical Development

Continue Investment in Scalable Infrastructure – wet and dry lab

Deliver on Strategic Partnerships

Create additional SaaS opportunities to advance the creation of medicines

Recursion

# Partnerships

# We harness value from the Recursion OS with a multi-pronged capital-efficient business strategy

**Pipeline**

## Pipeline Strategy

Build internal pipeline in indications with potential for **accelerated path** to approval

- **Precision Oncology**
- **Rare Disease**

**Partnerships**

## Partnership Strategy

Partner in **complex therapeutic areas** requiring large financial commitment or competitive arbitrage

**Leverage partner knowledge** and clinical development capabilities

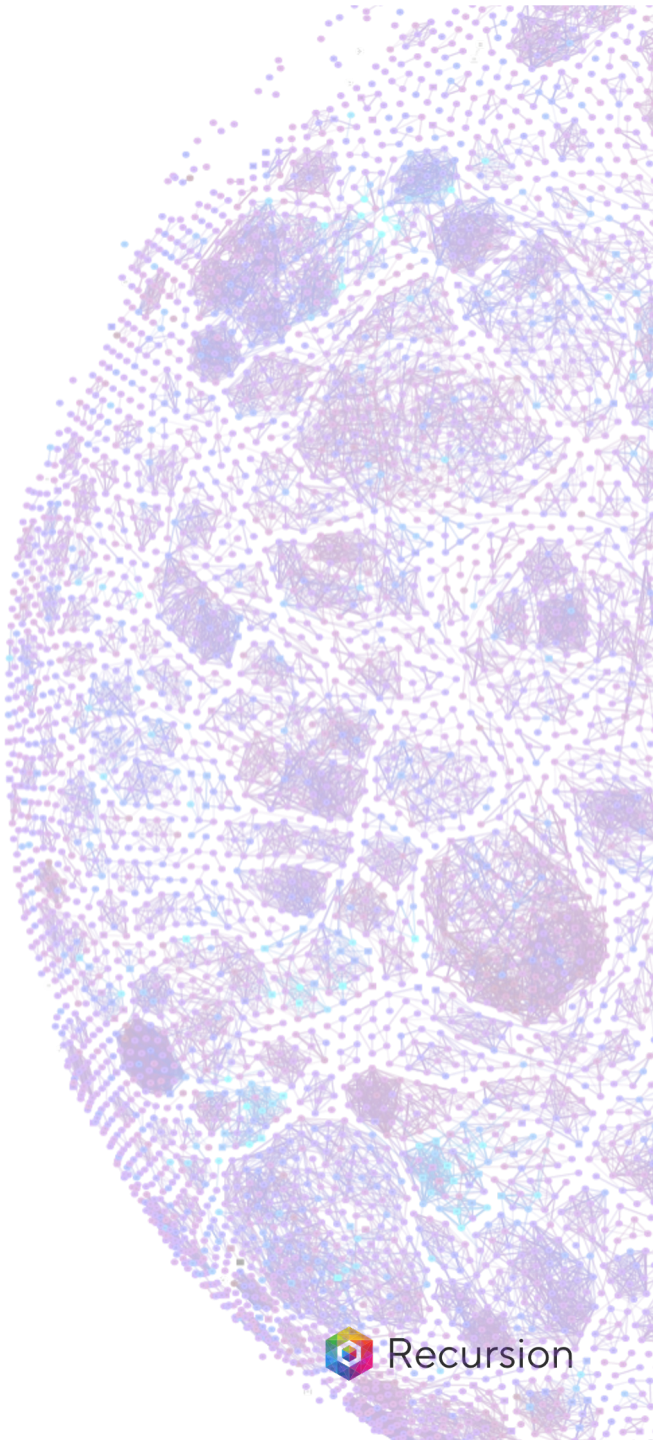
**More than a dozen discovery and research programs in oncology or with our partners – first program optioned by Roche-Genentech in GI-oncology**

All populations defined above are US and EU5 incidence unless otherwise noted. EU5 is defined as France, Germany, Italy, Spain, and UK. (1) Prevalence for hereditary and sporadic symptomatic population. (2) Annual US and EU5 incidence for all *NF2*-driven meningiomas. (3) Prevalence for adult and pediatric population. (4) Our program has the potential to address several indications. (5) We have not finalized a target product profile for a specific indication. (6) Incidence for US only. (7) 2L+ drug-treatable population. (8) 2L+ drug-treatable population comprising ovarian, prostate, breast, and pancreatic cancers.

# **REC-994** for the Treatment of Symptomatic Cerebral Cavernous Malformations (CCM)

| | |
|---|---|
| **Target / MOA** | Superoxide Scavenger |
| **Molecule Type** | Small Molecule |
| **Lead Indication(s)** | Cerebral Cavernous Malformations |
| **Status** | Phase 2 |
| **Designation(s)** | US & EU Orphan Drug |
| **Source of Insight** | Recursion OS |



Clinical: CCM

# SYCAMORE Clinical Trial: REC-994 for CCM Phase 2 Fully Enrolled

## PREVALENCE & STANDARD OF CARE

~360,000

**Symptomatic US + EU5,** >1 million patients worldwide live with these lesions today

**>5x larger** US patient population than other rare diseases like Cystic Fibrosis (>31k patients)

**No approved therapy**

- Most patients receive no treatment or only symptomatic therapy
- Surgical resection or stereotactic radiosurgery not always feasible because of location and is not curative

## CAUSE

**LOF mutations in genes *CCM1*, *CCM2* & *CCM3***, key for maintaining the structural integrity of the vasculature due to unknown mechanisms

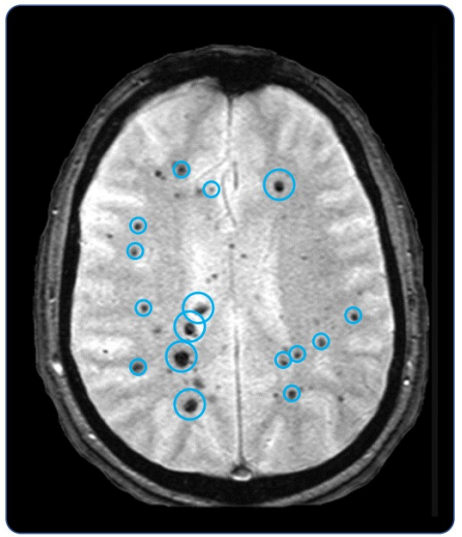
## PATHOPHYSIOLOGY & REASON TO BELIEVE

**Vascular malformations of the CNS** leading to focal neurological deficits, hemorrhage and other symptoms

Efficacy signal in Recursion OS as well as functional validation via scavenging of massive superoxide accumulation in cellular models; reduction in lesion number with chronic administration in mice

## KEY ELEMENTS

- Targeting **sporadic and familial symptomatic CCM** patients with *CCM1*, *CCM2*, and *CCM3* mutations
- Superoxide scavenger, small molecule
- Phase 2 readout **expected September 2024**
- US & EU **Orphan Drug Designation**



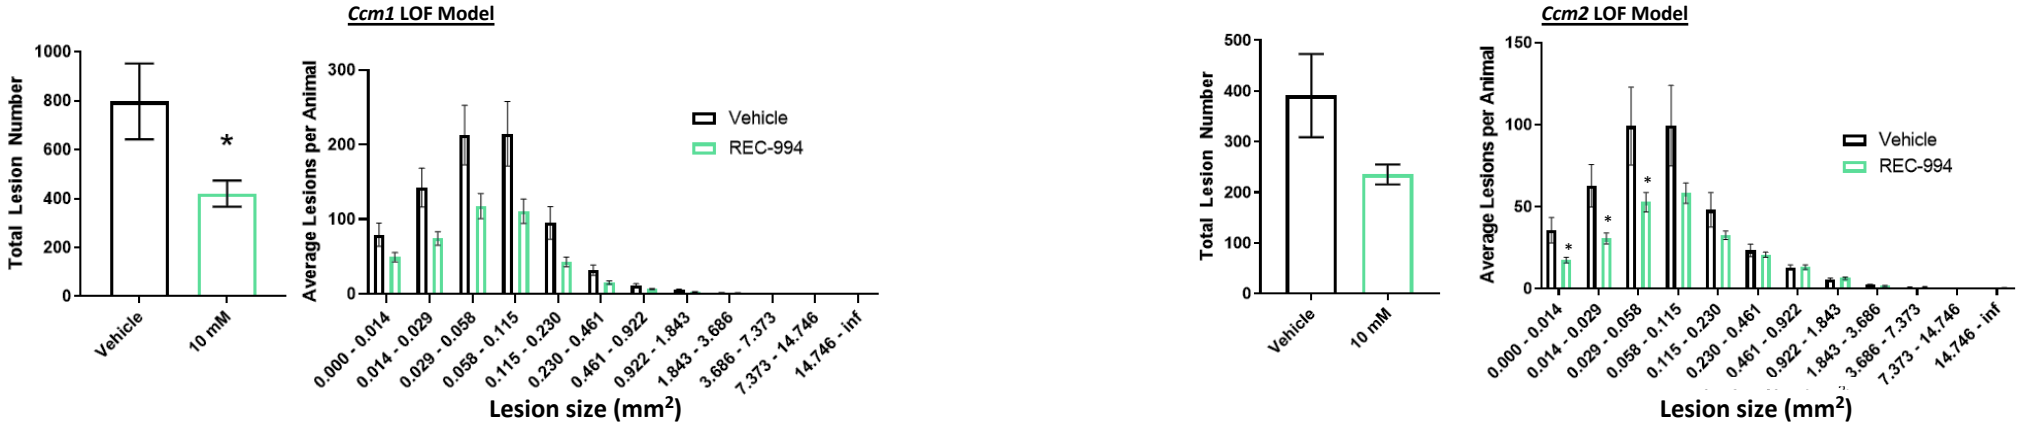
Vascular malformations (cavernomas)

Julia – living with CCM

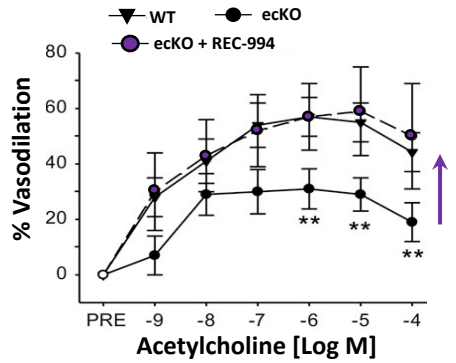
# Preclinical Studies Confirm Insight

**Preclinical Studies: REC-994 reduces lesion burden and ameliorates vascular defects in genetic mouse models of CCM**

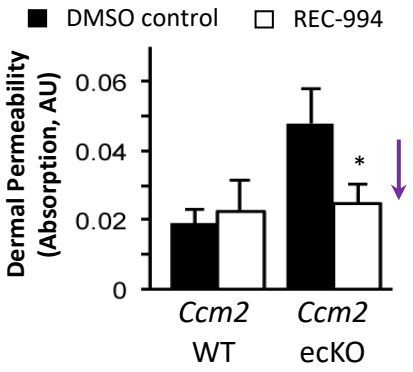
## 1 Reduces lesion number & size in *Ccm1* and *Ccm2* LOF mouse models



## 2 Rescues acetylcholine-induced vasodilation defect



## 3 Rescues dermal permeability defect in CCM2 mice



- **REC-994 stabilizes the integrity of vasculature against challenges to permeability**
- **Altered vascular permeability is a clinically relevant feature of CCM lesions**

*Source: Data above from Gibson, et al. Strategy for identifying repurposed drugs for the treatment of cerebral cavernous malformation. Circulation, 2015 or Recursion internal data (Ccm1 mouse model)*

# SYCAMORE Clinical Trial : REC-994 for CCM Phase 2 Fully Enrolled

**Topline Data Expected September 2024**

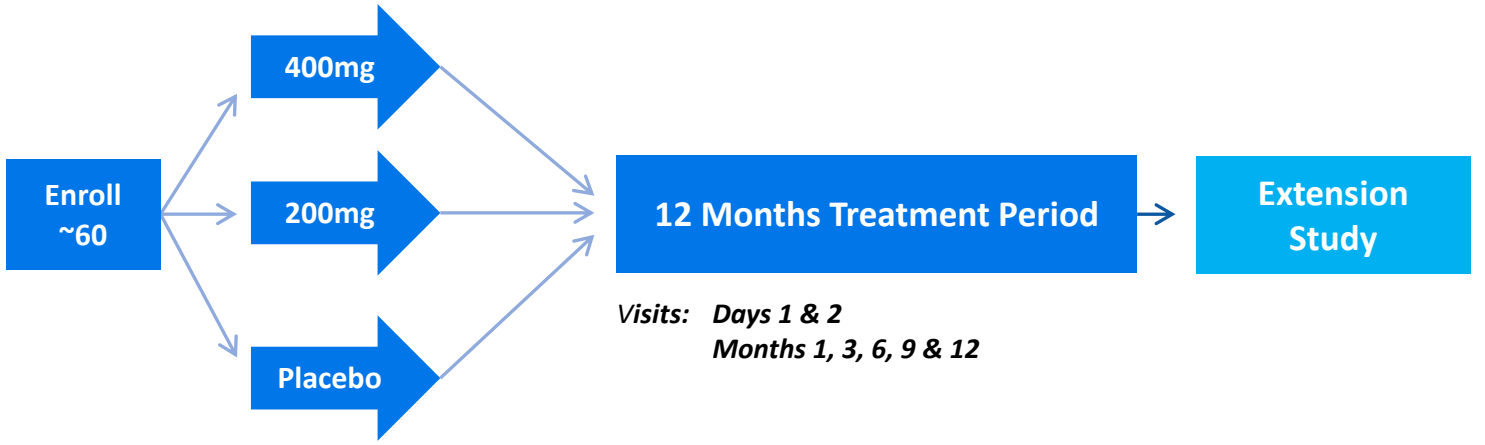
## Enrollment Criteria

- MRI-confirmed CCM lesion(s)
- Familial or sporadic
- Symptoms directly related to CCM

## Outcome Measures

- Primary: Safety and tolerability
- Secondary: Efficacy
- Exploratory: Biomarkers

| Screening & Randomization 1:1:1 | Treatment | Follow-up |
|---|---|---|



*Source : The Symptomatic Cerebral Cavernous Malformation Trial of REC-994 (SYCAMORE)*

# REC-994 for CCM: Expectations

## Outcome Measures

- **Primary: Safety and Tolerability**
  - **Adverse events & symptoms**
- **Secondary & Exploratory:**
  - **Efficacy**
    - **Clinician-measured outcomes** (CGI, PGI)
    - **MRI Imaging**
    - **Impact of acute stroke** (mRS, NIHSS)
    - **Patient and Investigator reported outcomes** (SMSS, PROMIS-29, CCM-HI, symptom questionnaires)

## Trial Update

- **Enrollment is complete**
- **Vast majority of participants** who completed 12 months of treatment continue to enter **long-term extension**
- **Analysis**
  - Identification of **trends across multiple endpoints**
  - **Changes in vascular permeability**
    - E.g., hemosiderin deposition
  - **Change in lesion burden**
  - **Subgroup**

Source: https://clinicaltrials.gov/study/NCT05085561

# **REC-2282** for the Treatment of Progressive Neurofibromatosis Type 2 (NF2) Mutated Meningiomas

| | |
|---|---|
| **Target / MOA** | HDAC Inhibitor |
| **Molecule Type** | Small Molecule |
| **Lead Indication(s)** | NF2 Mutated Meningiomas |
| **Status** | Phase 2/3 |
| **Designation(s)** | Fast Track; US and EU Orphan Drug |
| **Source of Insight** | Recursion OS |

Clinical: NF2

# POPLAR Clinical Trial: REC-2282 for NF2 Part A Underway

## PREVALENCE & STANDARD OF CARE

~33,000 **Treatable US + EU**

**No approved therapy**

- Surgery/RT is standard of care (when feasible)
- Location may make complete resection untenable, leading to hearing loss, facial paralysis, poor balance and visual difficulty
- **Stasis or shrinkage of tumor could improve prognosis**

## CAUSE

**LOF mutations in *NF2* tumor suppressor gene**, leading to deficiencies in the tumor suppressor protein merlin

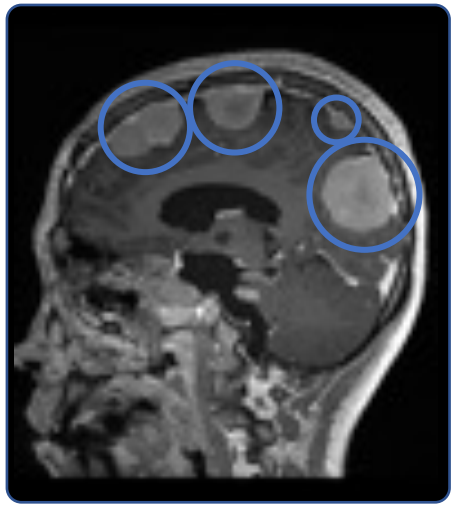
## PATHOPHYSIOLOGY & REASON TO BELIEVE

Inherited rare **CNS tumor syndrome** leading to loss of hearing and mobility, other focal neurologic deficits

Efficacy signal in Recursion OS, cellular, and animal models; suppression of aberrant ERK, AKT, and S6 pathway activation in a Phase 1 PD Study in NF2 patient tumors

## KEY ELEMENTS

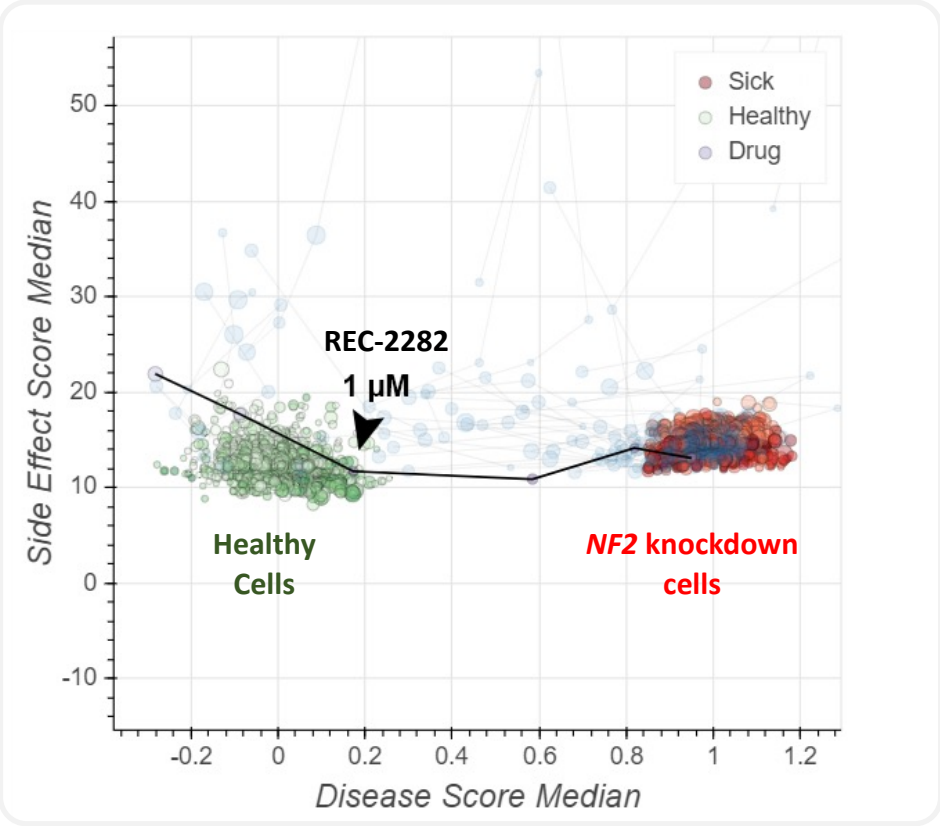
- Targeting **familial & sporadic NF2 meningioma** patients
- HDAC inhibitor, small molecule
- Oral dosing
- Preliminary readout **expected Q4 2024**
- **Fast-Track** and US & EU **Orphan Drug Designation**



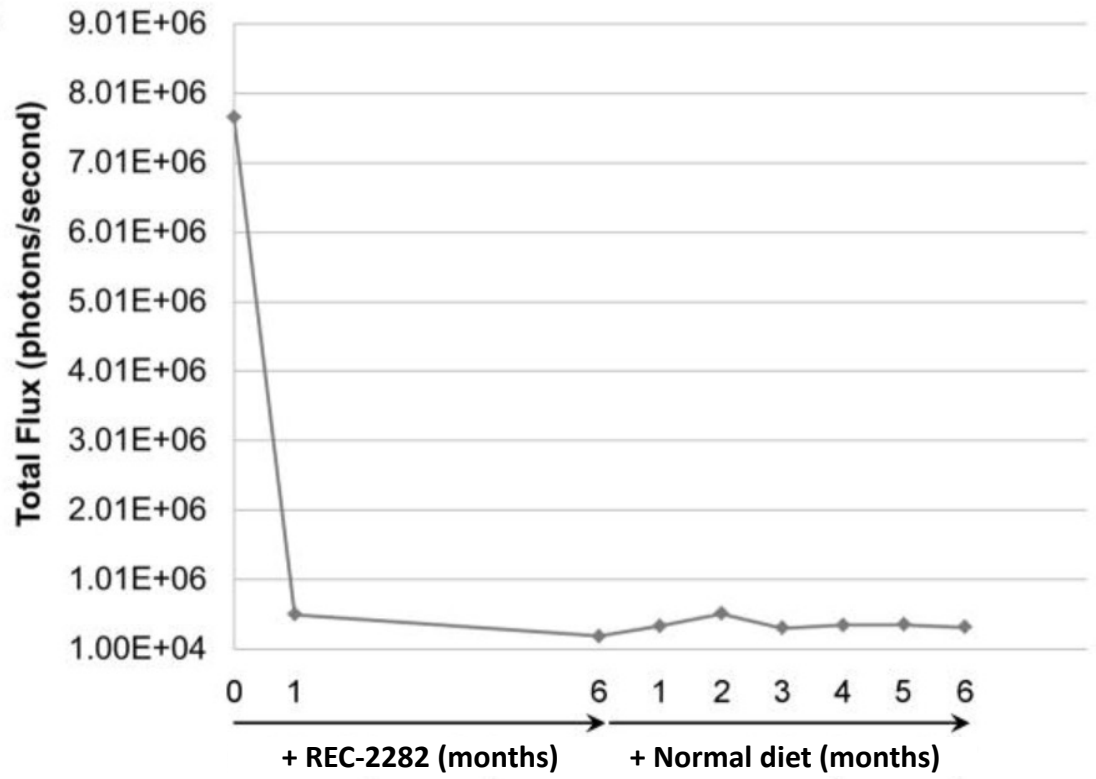
Intracranial meningiomas

Ricki – living with NF2

# Insight from OS : REC-2282 Rescued Loss of NF2



**Prevents growth & regrowth of NF2-deficient meningioma model in mice**



*HUVEC, human umbilical vein endothelial cells; NF2, neurofibromatosis type 2; siRNA, small interfering RNA.*

# POPLAR Trial: REC-2282 for NF2 Part A Underway

## Key Enrollment Criteria

- MRI-confirmed progressive meningioma
- Sporadic meningioma with confirmed NF2 mutation
- Familial NF2 meningioma
- Have documented progression with past 24 months

## Outcome Measures

- Primary: PFS6 defined as proportion of patients who are alive or progression free after
- Secondary: ORR, Safety, PK/PD

**Phase 2/3 trial initiated in Q2 2022**

*Phase 2 portion*

40 mg TIW
~6 Sporadic
~6 Familial

60 mg TIW
~6 Sporadic
~6 Familial

→ **6-month PFS (Futility Analysis)** →

FDA Mtg

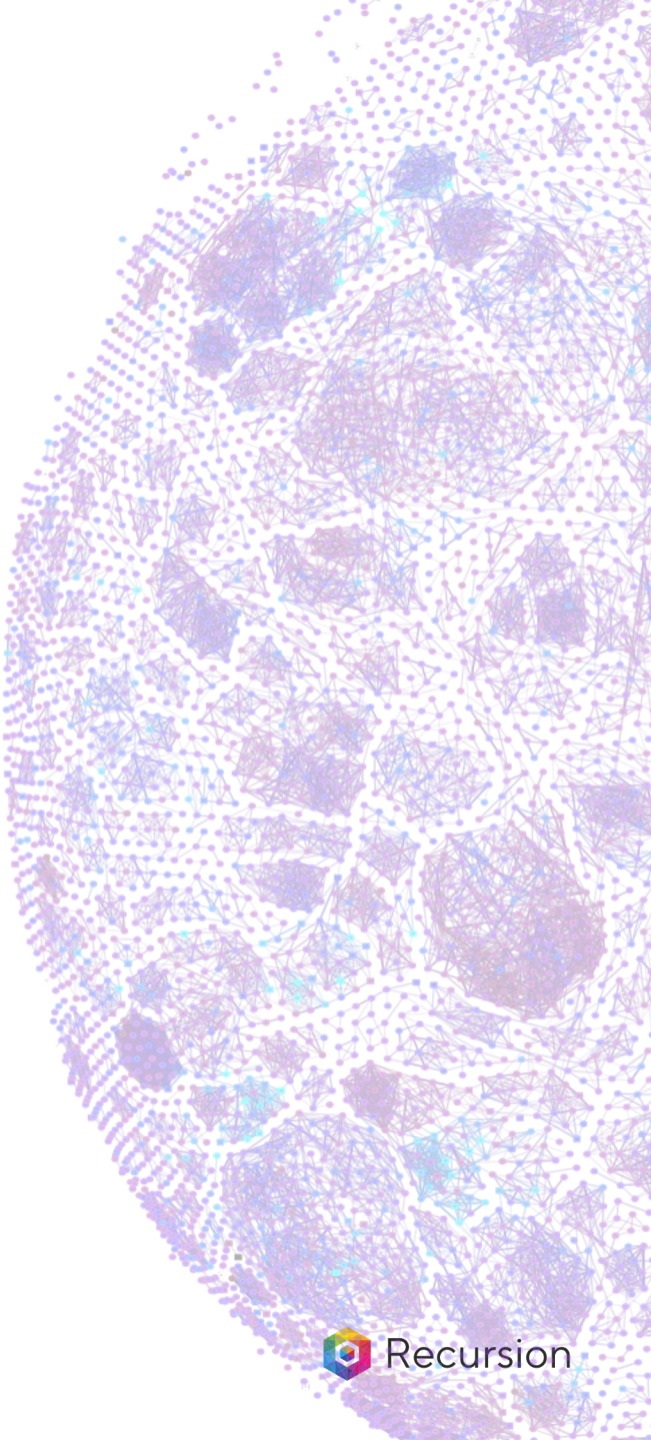
- ***Go/No-go to Ph3***
- ***Safety/Tolerability***
- ***PK***
- ***PFS***

**Preliminary Phase 2 readout** (safety & preliminary efficacy) expected in **Q4 2024**

*Source : Efficacy and Safety of REC-2282 in Patients With Progressive Neurofibromatosis Type 2 (NF2) Mutated Meningiomas (POPLAR-NF2)*

# **REC-4881** for the Treatment of Familial Adenomatous Polyposis (FAP)

| | |
|---|---|
| **Target / MOA** | MEK Inhibitor |
| **Molecule Type** | Small Molecule |
| **Lead Indication(s)** | Familial Adenomatous Polyposis |
| **Status** | Phase 2 |
| **Designation(s)** | Fast Track; US and EU Orphan Drug |
| **Source of Insight** | Recursion OS |



Clinical: FAP

# TUPELO Clinical Trial : REC-4881 for FAP Phase 2 Underway

## PREVALENCE & STANDARD OF CARE

**~50,000** **Diagnosed US + EU**

**No approved therapy**

- Colectomy during adolescence (with or without removal of rectum) is standard of care
- Post-colectomy, patients still at significant risk of polyps progressing to GI cancer
- Significant decrease in quality-of-life post-colectomy (continued endoscopies, surgical intervention)

## CAUSE

**Inactivating mutations in the tumor suppressor gene *APC***

## PATHOPHYSIOLOGY & REASON TO BELIEVE

**Polyps throughout the GI tract** with extremely high risk of malignant transformation

Efficacy signal in the Recursion OS showed specific MEK 1/2 inhibitors had an effect in context of *APC* LOF. Subsequent $APC^{min}$ mouse model showed potent reduction in polyps and dysplastic adenomas

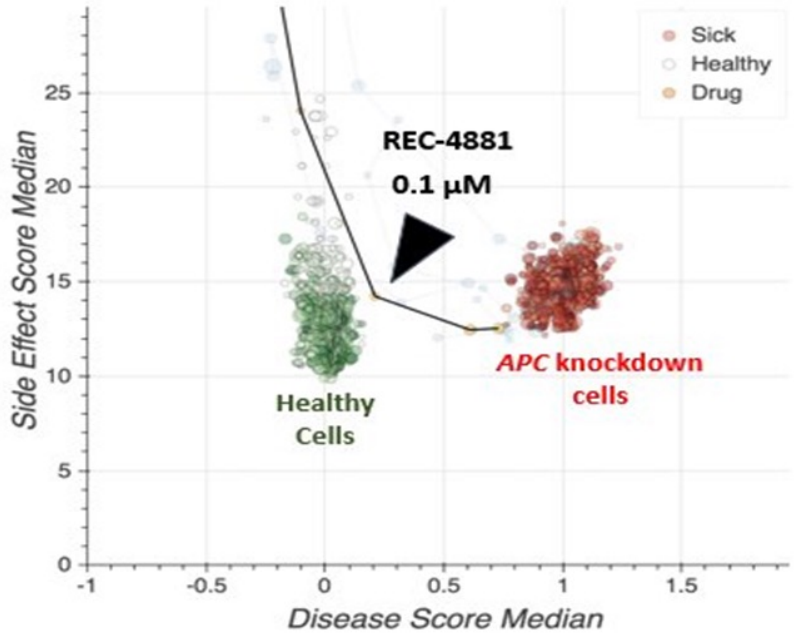
## KEY ELEMENTS

- Targeting **classical FAP patients (with *APC* mutation)**
- MEK inhibitor, small molecule
- Oral dosing
- Preliminary readout **expected H1 2025**
- **Fast-Track** and US & EU **Orphan Drug Designation**

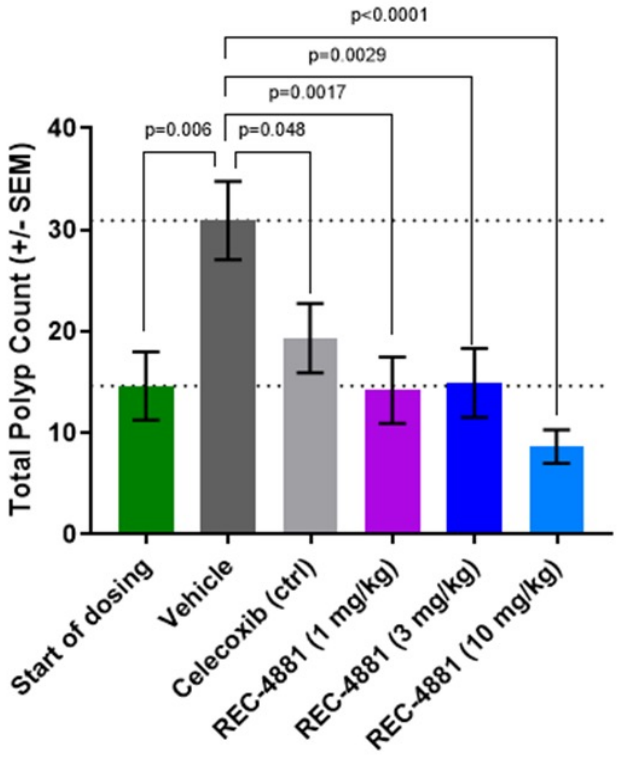
Polyps Found in Colon and Upper GI Tract

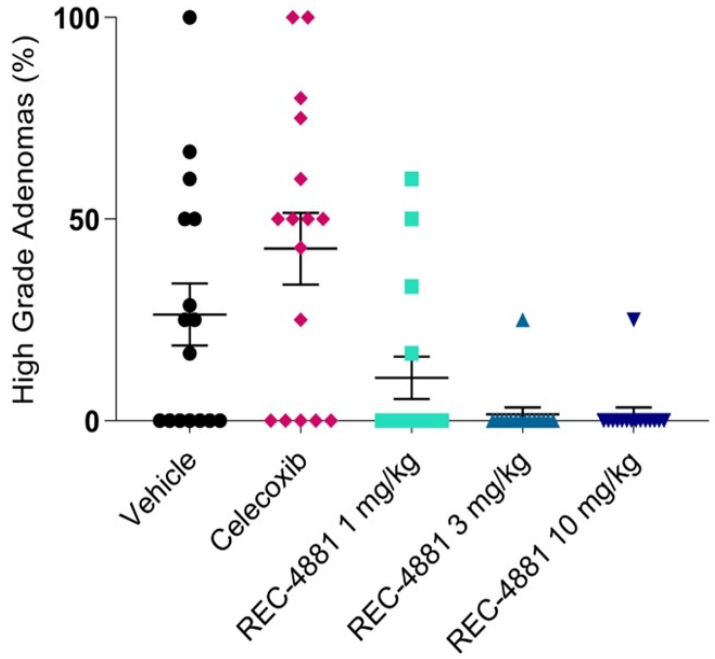
# Preclinical Validation of Novel OS Insight in Relevant FAP Models

## REC-4881 rescued phenotypic defects of cells with APC knockdown



## ↓ polyp count





# TUPELO Clinical Trial : REC-4881 for FAP Phase 2 Underway

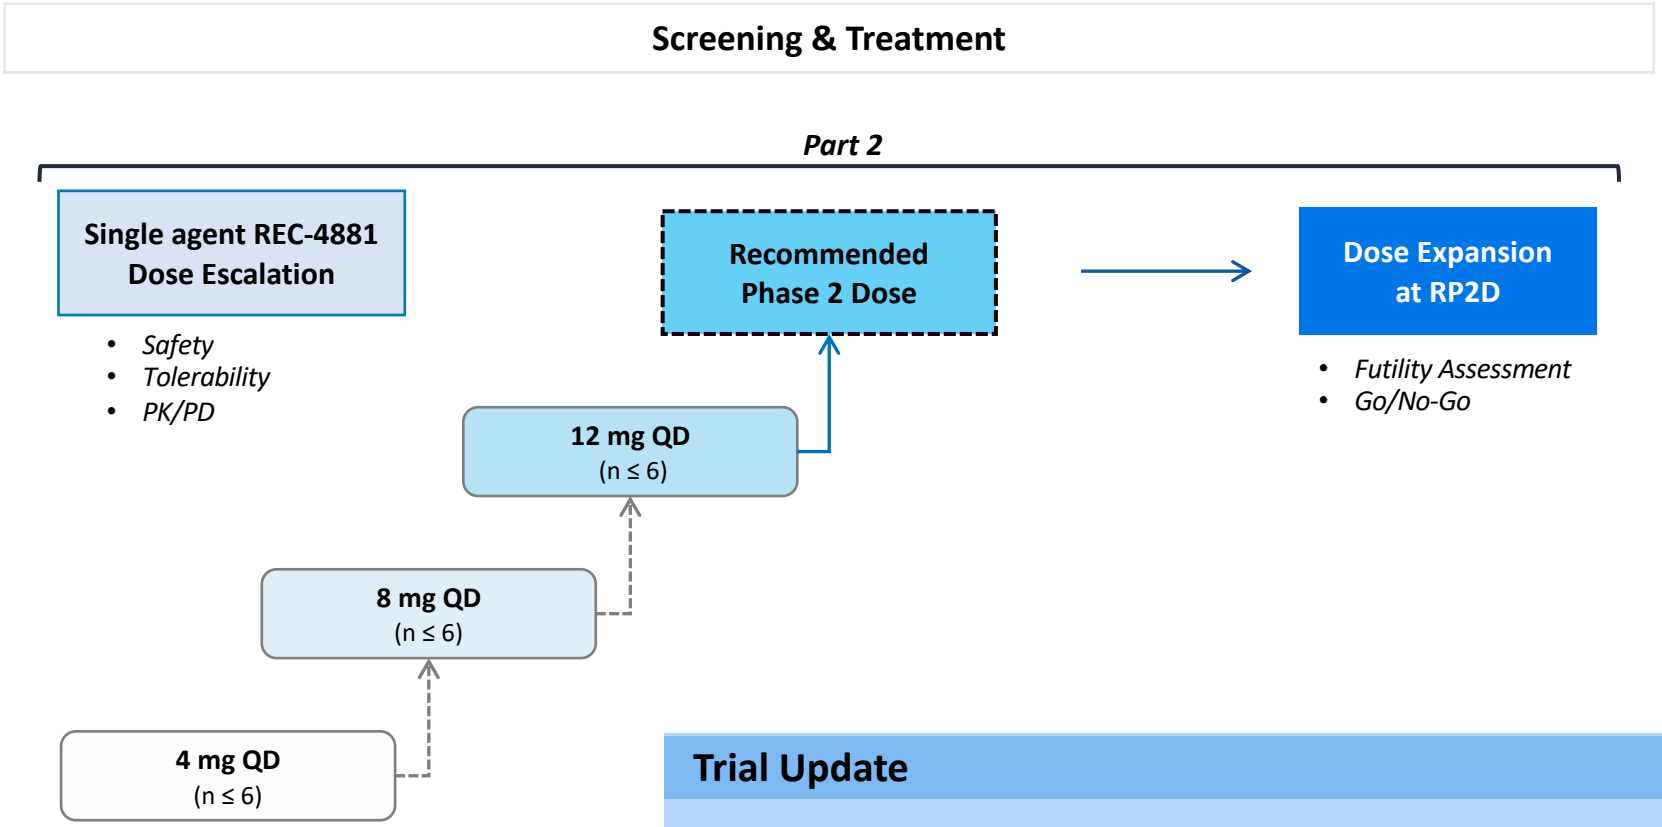
## Part 2 Enrollment Commenced

### Key Enrollment Criteria

- Confirmed *APC* mutation
- ≥ 55 years old
- Post-colectomy/proctocolectomy
- No cancer present
- Polyps in either duodenum (including ampulla of vater) or rectum/pouch

### Outcome Measures

- Primary:
  - Safety & Tolerability
  - Change from baseline in polyp burden at 12 weeks
  - RP2D
- Secondary:
  - PK/PD



### Trial Update

**Phase 2 initiated** preliminary **readout** expected by H1 **2025**

*Source : Evaluate REC-4881 in Patients With FAP (TUPELO)*

# **REC-4881** for the Treatment of Solid Tumors with AXIN1 or APC Mutations

| | |
|---|---|
| **Target / MOA** | MEK Inhibitor |
| **Molecule Type** | Small Molecule |
| **Lead Indication(s)** | Solid Tumors with AXIN1 or APC Mutations |
| **Status** | Phase 2 |
| **Source of Insight** | Recursion OS |

# LILAC Clinical Trial: REC-4881 for AXIN1 or APC mutant cancers

**~104,000** **Treatable US + EU5**

**Substantial need** for developing therapeutics for patients harboring mutations in *AXIN1* or *APC*, as these **mutations are considered undruggable**

To our knowledge, REC-4881 is the **only industry sponsored small molecule therapeutic** designed to enroll solid tumor patients harboring mutations in *AXIN1* or *APC*

## CAUSE

**LOF mutations in *AXIN1* or *APC* tumor suppressor genes**

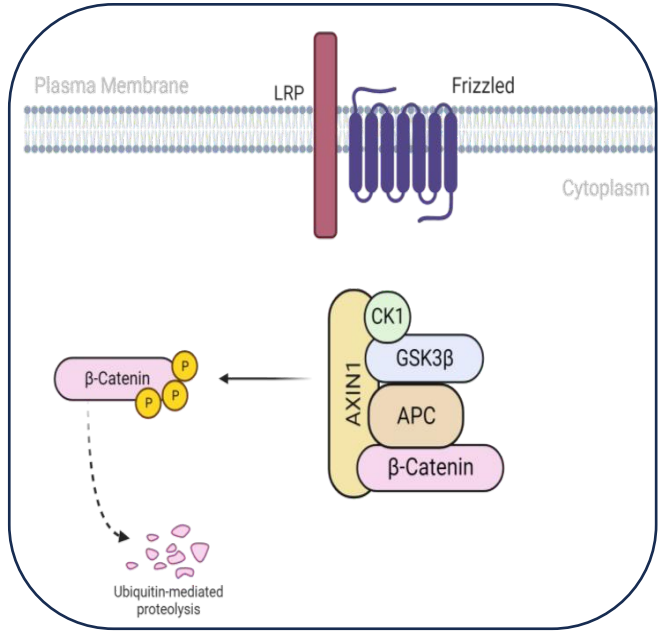
## PATHOPHYSIOLOGY & REASON TO BELIEVE

**Alterations in the WNT pathway** are found in a **wide variety of tumors** and confer poor prognosis and resistance to standard of care

Efficacy signal in the Recursion OS and favorable results in PDX models harboring *AXIN1* or *APC* mutations vs wild-type leading to a significant PFS benefit only in mutant models

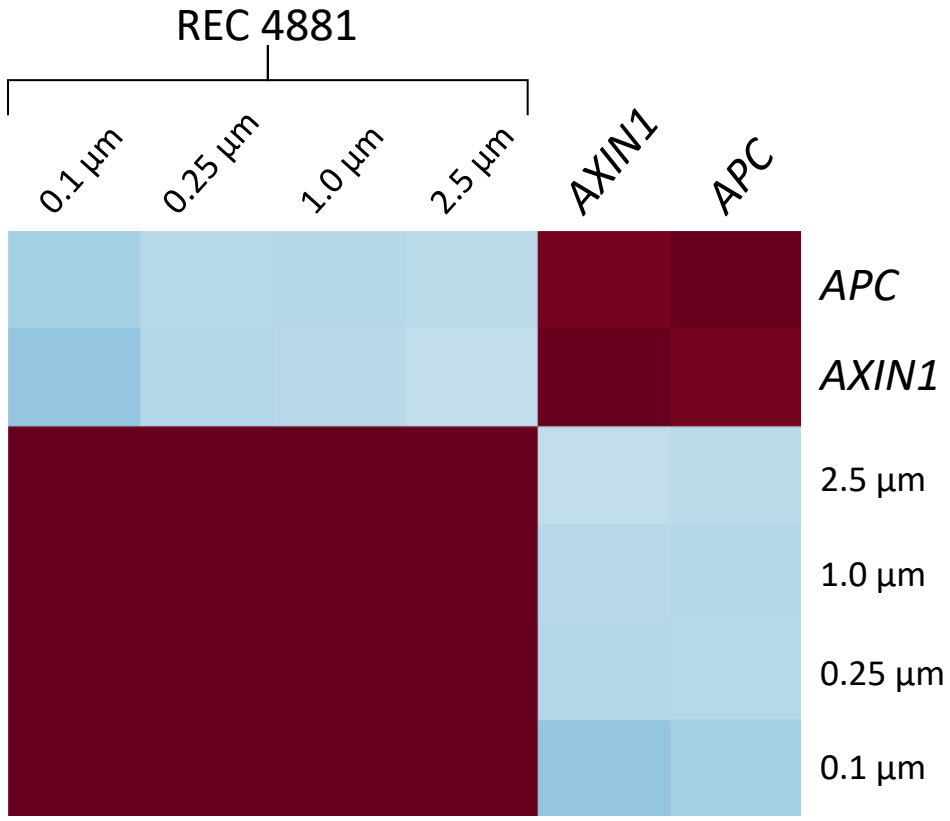
## KEY ELEMENTS

- Targeting ***AXIN1* or *APC* mutant cancers**
- MEK inhibitor, small molecule
- Oral dosing
- **Enrollment ongoing**
- Phase 2 initial readout **expected H1 2025**



AXIN1/APC regulate WNT pathway

# Recursion OS Identified Novel Insight of AXIN1 & APC biology



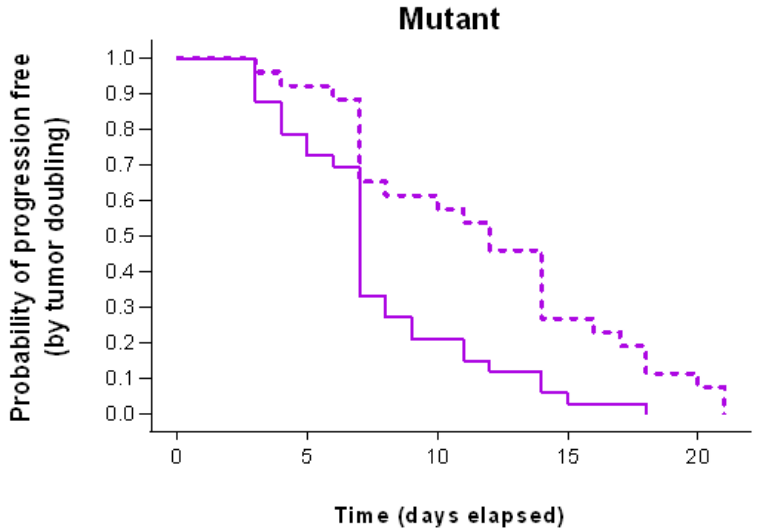
**REC-4881 is phenotypically opposite to the genetic KO of *APC* and *AXIN1* providing a novel mechanism that may restore the disease state modeled by the loss of these genes**

**Significantly greater antitumor activity in mutant models led to significant PFS benefit**

| | Median PFS (days) | 95% CI |
|---|---|---|
| REC-4881 (n = 33) | 12.0 | (7.18 - 20.01) |
| Vehicle (n = 33) | 7.0 | (4.19 - 11.70) |

**Log-rank p value < 0.001**

HR = 0.49 (95% CI 0.29 - 0.83)



# LILAC Clinical Trial: REC-4881 for AXIN1 or APC mutant cancers

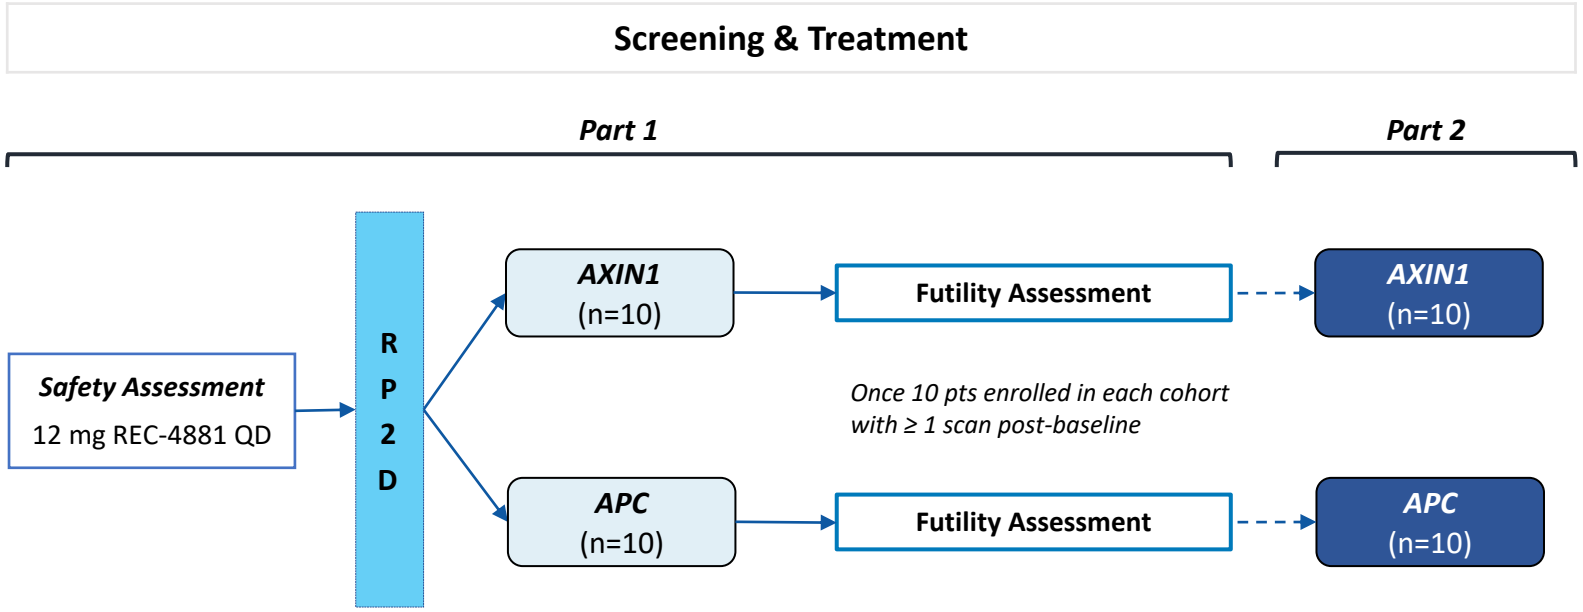
**FPI achieved Q1 2024**

## Enrollment Criteria

- Unresectable, locally advanced, or metastatic cancers
- ≥ 55 years old
- *AXIN1* or *APC* mutation confirmed by NGS (tissue or blood)
- CRC patients must be *RAS / RAF* wildtype
- No MEK inhibitor treatment within 2 months of initial dose
- ≥ 1 prior line of therapy
- ECOG PS 0-1

## Outcome Measures

- Primary
  - Safety/tolerability
  - ORR (RECIST 1.1)
- Secondary
  - PK
  - Additional efficacy parameters



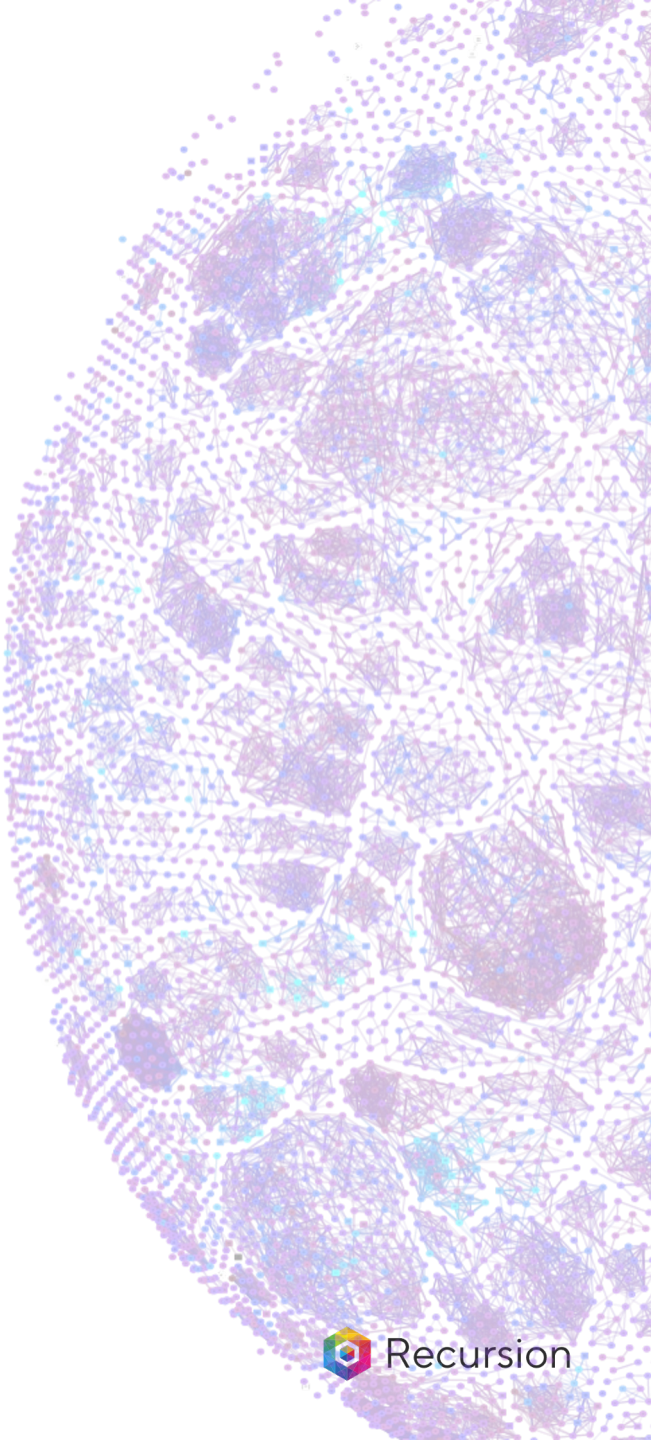
## Trial Update

- Utilizing genomics & RWD data for patient/site matching
- **Phase 2** initial **readout** expected **H1 2025**

Source : A Study of REC-4881 in Participants With Cancers Which Have an AXIN1 or APC Mutation

# **REC-3964** for the Prevention of *C. difficile* Infection (CDI)

| | |
|---|---|
| **Target / MOA** | Selective *C. difficile* Toxin Inhibitor |
| **Molecule Type** | Small Molecule |
| **Lead Indication(s)** | Prevention of CDI |
| **Status** | Phase 2 |
| **Source of Insight** | Recursion OS |



Clinical: C. difficile

# ALDER Clinical Trial: REC-3964 for *C. Difficile*

## PREVALENCE & STANDARD OF CARE

~730,000 Diagnosed US + EU5 patients

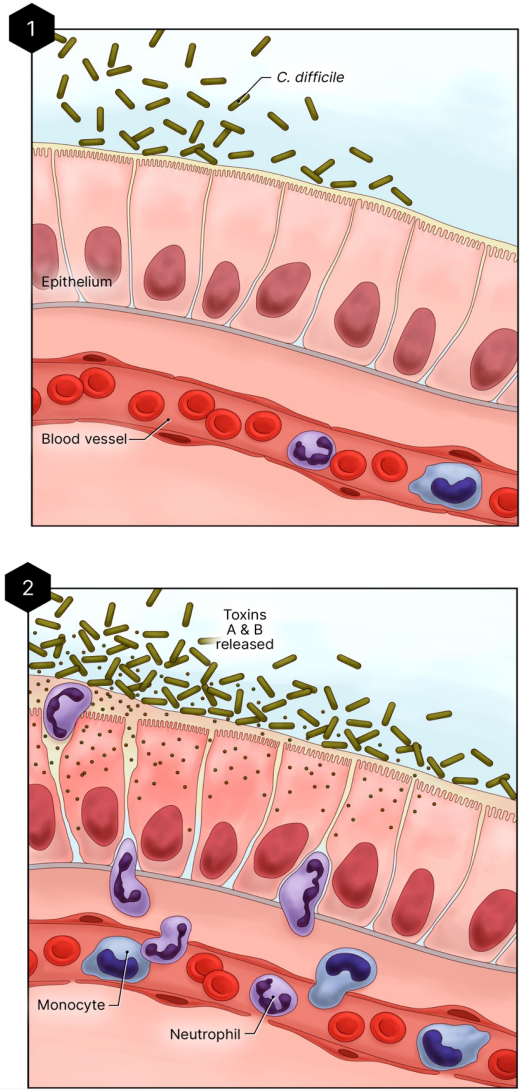
- **Severity of infection varies and can range from mild to severe, requiring colectomy**
  - **>29,000 patients** die in the US each year from CDI
- **Cost burden of up to $4.8bn annually**

## TREATMENT PARADIGM

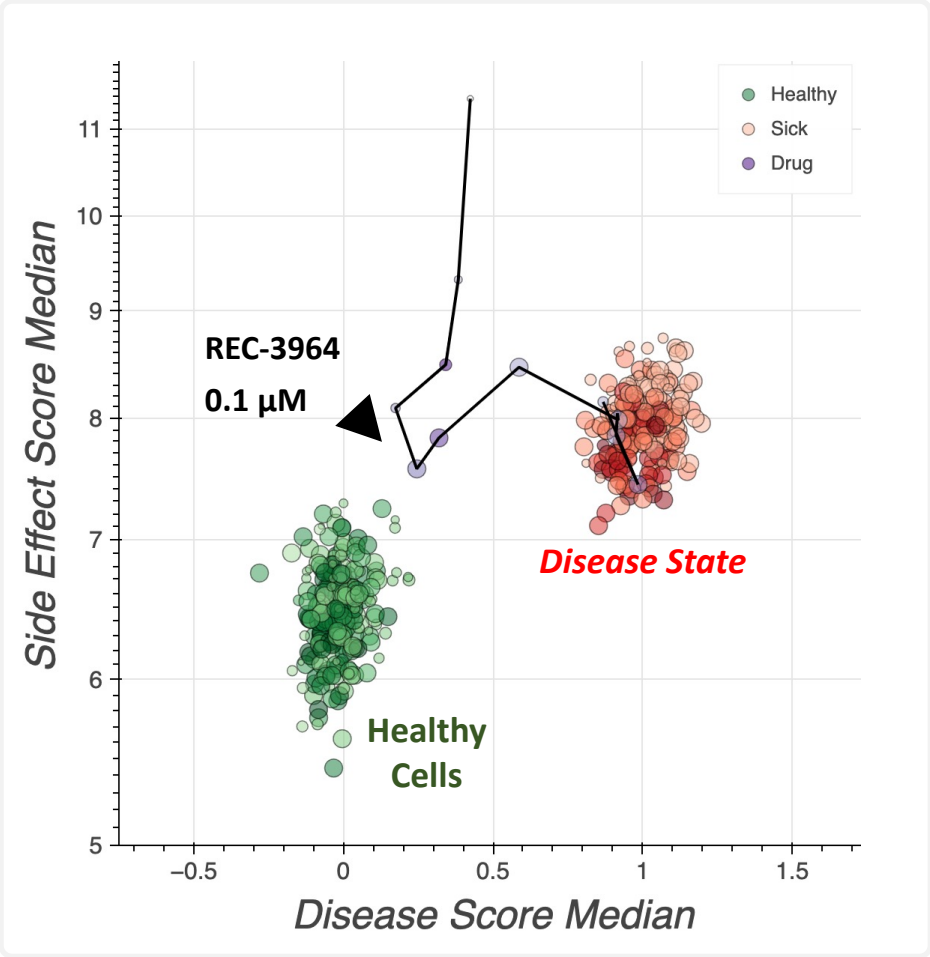
- Standard of care for 1st occurrence: Antibiotics alone
- Recurrence (20-30% of patients) treated with antibiotics ± adjunct therapy (bezlotoxumab IV or fecal transplant)
- REC3964 inhibits the C. difficile toxins and is a non-antibiotic therapy

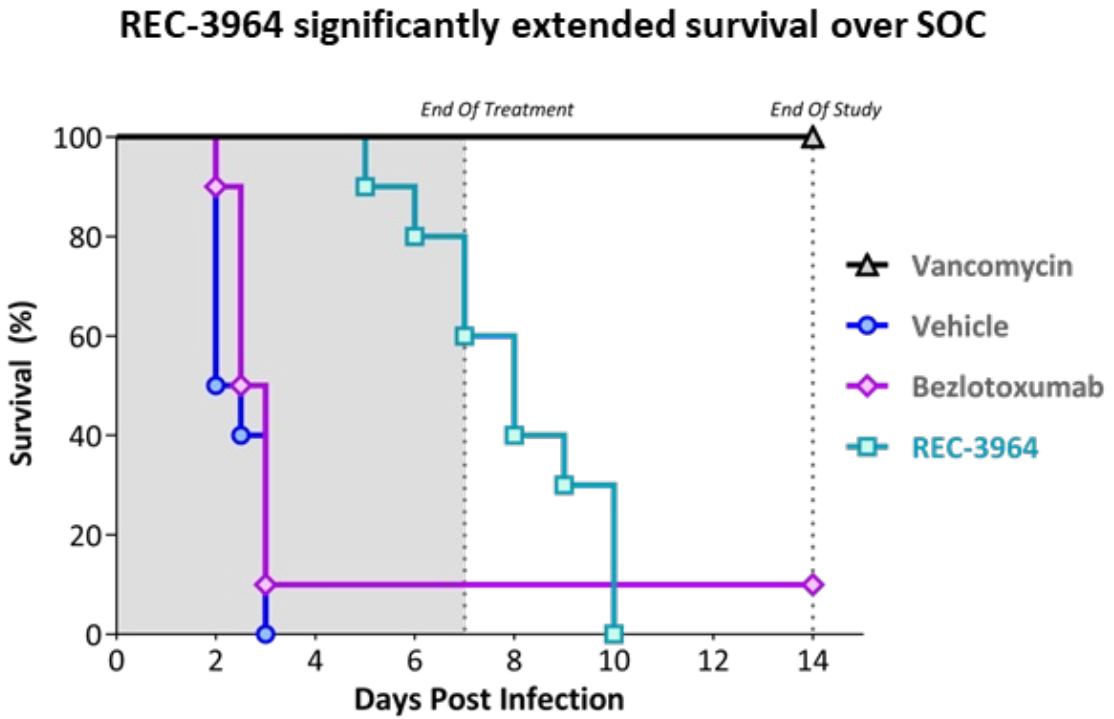
## PATHOPHYSIOLOGY & REASON TO BELIEVE

- Selective Inhibitor of C. difficile Toxins
- Recursion's 1st Small Molecule NCE to Reach the Clinic
- Binds and blocks catalytic activity of the toxin's innate glucosyltransferase, but not the host's



# Insight from OS: REC-3964 Rescued Cells Treated with *C. diff* Toxins





- REC-3964 potently inhibits toxin B with residual activity against toxin A, while bezlotoxumab is specific to toxin B.
- Significant difference in probability of survival vs bezlotoxumab alone at the end of treatment (**p<0.001**, log-rank test)

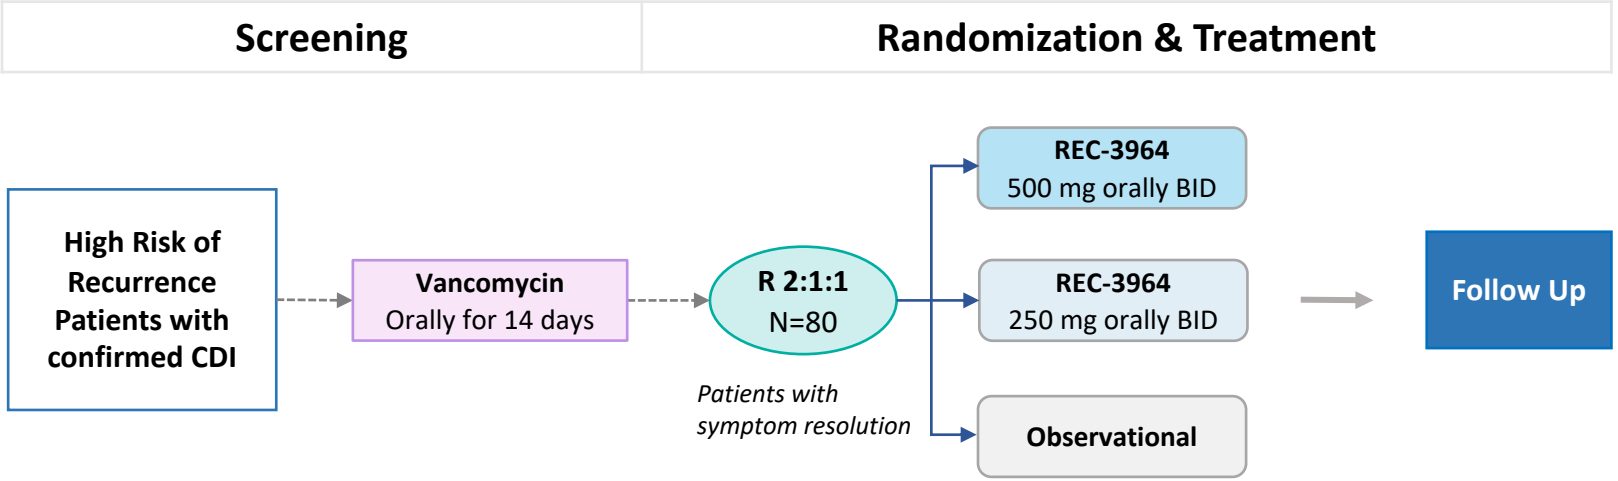
# ALDER Clinical Trial: POC Phase 2 REC-3964 in Patients at High Risk of *C. Diff* Recurrence

## Enrollment Criteria

- Patients at high risk of recurrence
- ≥3 bowel movements in 24 hours
- Confirm CDI using EIA (toxin)
- No fulminant CDI
- No history of chronic diarrheal illness due to other causes

## Outcome Measures

- Primary
  - Rate of recurrence
- Secondary
  - Additional efficacy measures
  - Safety / tolerability
  - PK



## Trial Updates

- Phase 1 and DDI studies **completed**
- **Phase 2 initiation** expected in **Q4 2024,** preliminary **readout** expected by end of **2025**

# Novel Insights into **RBM39** Degradation for the Treatment of Select HR-Proficient Solid Tumors

| | |
|---|---|
| **Target / MOA** | RBM39 Molecular Glue Degrader |
| **Molecule Type** | Small Molecule |
| **Lead Indication(s)** | TBD |
| **Status** | IND submission in Q3 2024,<br>Phase 1/2 initiation in Q4 2024 |
| **Source of Insight** | Recursion OS |

- **CCM: Ph2** readout expected in **September 2024**
- **NF2: Ph2** safety & preliminary efficacy expected in **Q4 2024**
- **FAP: Ph2** safety & preliminary efficacy expected in **H1 2025**
- **AXIN1 or APC Mutant Cancers: Ph2 FPI** achieved in **Q1 2024** with safety & preliminary efficacy expected in **H1 2025**
- ***C. difficile* Infection: Ph2 initiation** expected in **Q4 2024** with preliminary **readout** expected by end of **2025**

- **Target RBM39 / HR-Proficient Cancers: IND** submission expected in **Q3 2024** and **Ph1/2 initiation** expected in **Q4 2024** with **Ph1 dose-escalation readout** by end of **2025**
- **Target Epsilon** (novel target in fibrotic diseases): **IND** submission expected in **early 2025** with **Ph1 healthy volunteer readout** by end of **2025**

- **Dozens of internal & partner programs** in early stages with first **LLM & causal model driven programs entering pipeline**

# Milestones: Partnerships & Platform

## Partnerships

- **Roche & Genentech:** validation **program option exercised** for 1st validated hit series in oncology, potential **program & map options** on the near or very near-term
- **Bayer:** delivered **multiple oncology data packages,** on track to complete **25 unique data packages** in **Q3 2024**, initiated and advancing **1st joint project** towards lead series nomination, potential near-term **program options**, agreed to be **1st beta-user of LOWE** for drug discovery and development
- **Tempus & Helix:** building large-scale **causal AI models** to generate **target hypotheses** across cancer and other disease areas, exploring **novel NSCLC targets**
- Potential for **additional partnership(s)** in large, intractable areas of biology

## Platform

- Built our 1st genome-scale **transcriptomics KO map**, moving towards **multiomics foundation models**
- **Active learning** and exploration of **proteomics, organoids, spheroids, & automated synthesis**
- Potential to **make some data and tools available** to biopharma and commercial users
- OS moving towards **autonomous discovery**

### Strong Financial Position

**~$296M in cash Q1 2024**

*Cash refers to cash and cash equivalents at the end of Q1 2024*

Recursion

Recursion

Recursion

# Closing Remarks

# Our Hopes for Today

Let you get a feel for Recursion and hear from expert partners from outside Recursion about the current and potential future impact of our work

Help define what we view as a tipping point moment as BioTech transitions to TechBio and understand why Recursion is uniquely positioned to take advantage of this

Share details and updates on our:

- Pipeline – with 7 clinical trial readouts expected in the next ~18 months
- Partnerships - with potential near term options on both maps and programs
- Platform - with industry-leading data generation and compute
